Introduction

If you already viewed the “Requirements to Make a Word Document Accessible” module, you learned that properly formatted lists and columns are both accessibility requirements. In this module, we describe how to use the tools included in Word 2010 to make lists and columns readable by everyone.

There are added benefits to using these tools to make your work accessible – it is easier to do, and easier to make changes. A feature of Word 2010 that enhances accessibility is the automated Table of Contents tool that we will discuss later.

Lists

There are several ways to create a list in Microsoft Word 2010. One way is to use a list style. Available list styles can be found in the same Styles pane as headings. You can apply the style before or after you type the list. If you choose to type first, highlight the list when you are done and click on the style of your choice. Word provides styles for many list forms including

- Paragraph
- Bulleted
- Numbered
- Lettered, and
- List Continue (for when an item requires more than one paragraph).

You can also start by selecting a style before typing. Whenever you want to add another list item, just press the **Enter** key. When you're done, click on the next style you want to use.

Quick Way to Format a List

Another option is to use the **Bullets** and **Numbers** tools, which can be found in the **Lists** group of the Productivity/Accessibility Ribbon. (These options are also found in the **Paragraph** group of the Word ribbon's **Home** tab.)

By clicking on the image above the drop-down menu, you can apply the last formatting used. But by clicking on the drop-down, you can choose a style from the most used or even define a new one. This option is handy when you want to use a specific image or symbol as a bullet.

No matter how you make a list, adding and erasing sub-levels is the same. Press the **Tab** key to indent an item. Hold the **Shift** key and press **Tab** to move it back to the left. The **Demote** and **Promote** options in the **Productivity** ribbon can also be used.

Columns

In order to be accessible, columns must be created using the Columns tool, which is located in the middle of the **Productivity** Ribbon in the **Layout** group.

Once you have written the text, highlight it, and select the number of columns. You can also adjust the width and spacing of each column by clicking on **More Columns...**

Columns should be read from top to bottom and then from left to right, like a newspaper. Some may be tempted to create the appearance of columns by pressing the **Tab** key or **Spacebar**, but a screen reader will read over the tab and into the next column.

By using the **Columns** tool, screen readers can read the document in the correct reading order. Plus, it is much easier to edit column text when it is formatted with the **Columns** tool.

Table of Contents

Creating a table of contents is an easy way to enhance usability for everyone including people with disabilities. When headings are organized in a table of contents, the reader can quickly review the information contained in the document. Like the document navigation map, a table of contents outlines structure and allows for quick navigation. From the table of contents, you can skip to a certain topic by pressing the **Control** key and clicking on the heading.

If you decide to include a table of contents in your document:

1. First, place the cursor where you want to insert the table. Press **Enter** to move the rest of the document down, if needed.
2. Click on the **Productivity** tab, then in the **Structure** section select the **TOC** option, then choose a format for the table. (The Table of Contents option can also be found in the **References** tab of the Word ribbon.)

You can choose an automatic or manual table. If you use an automatic table and make edits to your document later, you can select **Update TOC** in the Productivity tab or the **Update Table** option in the **References** tab to include your changes.

If you use a manual table, you must add the title of each item and enter all updates and changes yourself.

Conclusion

Word 2010 has tools that are easy to use, which can help you make lists, columns, and documents readable by everyone.

This concludes our module on lists, columns, and table of contents.
