Introduction

Individuals with disabilities experience numerous challenges associated with participation in the labor force. The unemployment rate for individuals with disabilities is higher than for individuals without disabilities. Additionally, individuals with disabilities are more likely to work part time and, on average, earn less than individuals without disabilities at every level of educational attainment.

Individuals with disabilities enhance workforce diversity and can offer employers unique skill sets and perspectives. People with disabilities must think creatively about how to solve problems and accomplish daily tasks. This resourcefulness can translate into innovative thinking, new ideas, and alternative approaches to dealing with business challenges (U.S. Department of Labor Office of Disability Employment Policy, 2012). Because people with these attributes have the potential to strengthen the Texas labor market, individuals with disabilities are a valuable resource for Texas employers and the Texas economy. The Texas workforce system must support employment opportunities for people with disabilities in the public and private sectors and ensure that employers have access to every available skilled worker to maintain economic growth.

The Texas Workforce Investment Council

The Texas Workforce Investment Council (Council) was created in 1993 by the 73rd Texas Legislature. As an advisory body to the Governor and the legislature, the Council assists with strategic planning for and evaluation of Texas' workforce system. The 19-member Council includes representatives from business, labor, education, community-based organizations, and the Council's five-member state agencies.

Statutory Directive

Under Title 10 Texas Government Code Section 2308.101, the Council is responsible for promoting the development of a well-educated, highly skilled workforce for Texas and advocating the development of an integrated workforce system to provide quality workforce education and training to address the needs of employers and current and future workers in Texas.

The State Strategic Plan

The development of an integrated strategic plan for the workforce system is one of the Council's primary responsibilities. To sustain and increase economic growth, a well-trained labor supply must be available for employers seeking to establish, conduct, or expand business operations in Texas. The mission of *Accelerating Alignment: Texas Workforce System Strategic Plan for Fiscal Years 2024–2031* is to position Texas as a global economic leader by growing and sustaining a competitive workforce. All Texans are part of the critical pool of potential employees that is and will be required by Texas employers. This includes Texans with visual impairments or physical disabilities.

Scope of Report

The Council prepared this report to detail the demographic characteristics of individuals with disabilities in Texas. This research can be used as a general reference for data about this specific segment of the population and to understand the significant workforce issues related to individuals with disabilities. In the following sections, data issues and limitations are discussed, and important concepts are defined.

National data are used to provide an overview of individuals with disabilities in the U.S. and to discuss recent national labor force trends. The population of individuals with disabilities in Texas is described both generally and with a focus on the characteristics of individuals with disabilities who participate in the labor force. Finally, major findings are summarized and concluding comments offered. This report presents updated data sets from the demographic report published in 2024.

Methodology

This study analyzes multiple aspects of the population of individuals with disabilities at both the national and state levels using several data sources. As with all research, the limitations associated with the data sources determine the specific types of analyses that can be conducted. Additionally, this study references and utilizes several technical concepts with specific definitions. This section details data sources, the data limitations, and the key concepts related to this research.

Data Sources

The primary data sources used for this research are the U.S. Census 2023 American Community Survey (ACS) and labor force data from the Bureau of Labor Statistics (BLS). The ACS is an ongoing, yearly survey that samples a small percentage of the population including noninstitutionalized individuals living in group quarters such as college dormitories, residential treatment centers, and nursing facilities. The sample responses are weighted to approximate the demographic characteristics of the entire population. ACS data are available as summary tables and Public Use Microdata Sample (PUMS) files. The microdata files use a smaller sample than the summary tables but can be used for custom analyses. In this report, microdata is used for analyses at the national, state, and local level to maintain consistency.

The baseline population for each county and the county-specific rates for each type of disability were extracted from the 2023 ACS five-year estimates. The five-year estimates are generally used for analyzing smaller populations and geographies (U.S. Census Bureau, 2020a; U.S. Census Bureau, 2020b). Counties are not represented on the survey; allocation factors developed by the Missouri Census Data Center (2022) were used to align the respondents in the ACS geographic segments called Public Use Microdata Area (PUMA) with Texas counties. Rounding may affect totals.

BLS derives annual and monthly labor force statistics from the Current Population Survey (CPS). The CPS is an ongoing monthly survey administered to a sample of households. Economic statistics such as the national unemployment rate and measures related to employment and income use CPS data.

Data Processing

The findings from this report were processed through multifold data preparation and analysis from the aforementioned data sources' Application Programming Interface (API). The BLS data provide succinct categorized data variables and information for easy access and application. The ACS PUMS (microdata) file is detailed with 275 persons' variables from more than two million Texas respondents and a total of over 16.2 million U.S. respondents. Therefore, the PUMS (microdata) files for both 10 consecutive years longitudinal data and current year dataset required some form of data preparation using API and Extraction, Transformation, Loading (ETL) model. The cleaned datasets were analyzed into specific tables and loaded into the database for the final report visualization of tables and charts. The analysis also includes the conversion of specific PUMA data to county and LWDA data by multiplying the estimated PUMA data with the counties' allocation factor in each PUMA. The data processing is extensively illustrated in Appendix A.

Concepts

Several important concepts and categories are used throughout this report and serve as the basis for many of the analyses. The specific ways in which these concepts and categories are defined determine the number of individuals in these categories and the description of their characteristics. The concepts are conventional and frequently used by BLS and the U.S. Census Bureau. For clarity and replication of the analyses, the important concepts and categories referenced in this report are discussed in this section.

Disability

Disability is a complex and multidimensional concept. A single, universally accepted definition of “disability” does not exist. The World Health Organization (2013) considers disability to be an umbrella term covering impairments, activity limitations, and participation restrictions. Rather than representing a dichotomous category in which an individual either has or does not have a disability, degrees of disability exist, ranging from minor to severe. Additionally, different individuals with the same degree of disability may function at different levels because of personal and environmental factors.

In this report, individuals are considered to have a disability if they report having serious self-care, hearing, vision, independent living, ambulatory, or cognitive difficulties on the 2023 ACS. Difficulty and disability are, therefore, used interchangeably. Since the questions asked on the ACS do not directly address disabilities resulting from mental disorders, the estimates presented in this report may not include those individuals with psychiatric disabilities. Estimates from the 2023 National Survey on Drug Use and Health (NSDUH) indicate that 4.9 percent of individuals 18 or older in Texas had serious mental illness in the past year compared to 5.8 percent for the nation (Substance Abuse and Mental Health Services Administration, 2025). However, the number of individuals with serious mental illness identified by the NSDUH cannot simply be added to the ACS disability data since an unknown number of these individuals may also have a disability and, therefore, could be counted twice.

Noninstitutionalized Population

The noninstitutionalized population is composed of all individuals (including members of the armed forces), who are not inmates of institutions such as prisons, mental health facilities, or homes for older adults.

Civilian Noninstitutionalized Population

The noninstitutionalized civilian population includes all individuals, 16 years of age and older, who are not on active duty in the military and who are not inmates of institutions.

Civilian Labor Force

To remain consistent with accepted terminology and measures related to the labor force (such as the unemployment rate), several analyses in this report depend upon or reference the civilian labor force. The civilian labor force comprises all noninstitutionalized individuals, 16 years of age and older, who are either employed or unemployed and are not members of the armed forces. In this report, the individuals who constitute the civilian labor force are also referred to as labor force participants. Examples of individuals who are not in the labor force include students in school, homemakers, retirees, people who cannot work because of health problems, and discouraged job seekers (individuals who wanted jobs and looked for work in the past year but abandoned their search believing that no suitable jobs were available).

Unemployment

Individuals are considered unemployed if they do not have a job, have actively looked for work in the previous four weeks, and are currently available for work.

Data Issues and Limitations

The specific analyses that can be conducted are limited to the variables that are included in the datasets. Analyses may also be limited by a lack of available data for certain geographical boundaries. For example, even though the ACS microdata provide rich demographic data with variables assessing various individual characteristics, data are not available at the county level. Therefore, analyses cannot be conducted for counties using only the ACS microdata.

Unlike the decennial census, administered to the total population in order to determine accurate counts, the ACS and CPS are based on samples and produce data that approximate the size of the population. Since the surveys use different samples and methodologies, the data from each source is similar but does not exactly match. When possible, ACS data are referenced since the majority of the analyses in this report are based on that dataset.

Finally, the subsection that focuses on the labor force participants in Texas with disabilities uses ACS microdata based on the non-institutional civilian population. Any age differences in the groups used for each analysis are noted where applicable.

Individuals with Disabilities in the U.S.

According to ACS microdata estimates used in this section, 13 percent of the U.S. noninstitutionalized population (42,856,144 individuals) had a disability in 2023. Individuals with disabilities accounted for approximately seven percent of the civilian labor force 16 years of age and older in 2023. In this section, a general demographic description of the population of individuals with disabilities in the U.S. is provided as a context for a discussion of the population of individuals with disabilities in Texas in the following section.

Population Trends for Individuals with Disabilities in the U.S.

Illustrating change over time in the number of individuals with disabilities in the U.S. is complex. Because surveys use dissimilar questions to define disabilities, comparing the numbers of individuals with disabilities between different surveys is misleading. Even comparing the results of the same survey at two different time periods is complicated since some surveys have revised their disability questions and administered the questions to different age groups. For example, the 1990 census asked individuals between the ages of 16 and 64 about work disabilities, mobility limitations, and self-care limitations. In contrast, the 2000 census asked individuals aged five and older about work disabilities and sensory, physical, mental, self-care, and ambulatory difficulties. Additionally, no questions about disabilities were asked on the 2010 census since the long form was replaced by the ACS. Results from the 2013 to 2022 ACS presented in Figure 1 indicate that while the numbers of individuals with disabilities have been mostly increasing since 2013, the percentages of individuals with disabilities have consistently been between 12 to 13 percent of the total noninstitutionalized population.

Figure 1: Number of Individuals with Disabilities in U.S. and Percentage of Population, 2014–2023

Figure notes: 2023 ACS microdata. Percentages represent the portion of the total noninstitutionalized population with disabilities.

Regional Patterns

Individuals with disabilities are not evenly distributed across the nation. The ACS summary data indicate that the South had the largest number of individuals with disabilities in 2023. The region with the second largest number of individuals with disabilities was the West, followed by the Midwest. The Northeast had the smallest number. The regional distribution of individuals with disabilities can be examined in more detail by reviewing the population of individuals with disabilities for each state.

Table 1 illustrates the ten states with the largest populations of individuals with disabilities in 2023. Generally, states with the largest populations also had the largest numbers of individuals with disabilities. States with the smallest populations had the smallest numbers of individuals with disabilities. Texas had the second largest number of individuals with disabilities of all the states. North Dakota, Wyoming, and District of Columbia had the fewest numbers of individuals with disabilities.

Table 1: The Ten States with the Largest Populations of Individuals with Disabilities, 2023

State	Total Population	Individuals with Disabilities	Percent of Total of Population
California	38,926,192	4,365,725	11.2%
Texas	29,280,759	3,519,540	12.0%
Florida	21,670,197	2,937,589	13.6%
New York	19,701,319	2,399,500	12.2%
Pennsylvania	12,809,930	1,820,634	14.2%
Ohio	11,624,998	1,651,714	14.2%
Illinois	12,546,126	1,478,324	11.8%
Michigan	9,949,747	1,417,342	14.2%
North Carolina	10,475,559	1,401,543	13.4%
Georgia	10,687,790	1,383,667	12.9%

Table Notes: 2023 ACS microdata. Percentages represent the portion of the total noninstitutionalized population with a disability in each state.

Demographic Characteristics of the U.S. Population of Individuals with Disabilities

The population of individuals with disabilities in the U.S. can be better understood through an analysis of several key demographic variables. Generally, women are more likely to have a disability than men. The longer life expectancy of women may be a partial explanation of this association. Figure 2 illustrates that 13.2 percent of women in the U.S. had a disability in 2023 compared to 12.8 percent of men.

Figure 2: Number and Percentage of Individuals with Disabilities in the U.S. by Gender, 2023

Figure notes: 2023 ACS microdata.

Racial and ethnic differences also exist. A greater percentage of African American and White have a disability (14.5 and 14.3 percent respectively) followed by Other which includes Native American and Alaskan Natives (13 percent), Hispanics (10 percent), and Asians (7.8 percent).

Several demographic characteristics of the U.S. population of individuals with disabilities differ from the population of individuals without disabilities. On average, the population of individuals with disabilities is older than the population without disabilities. Table 2 illustrates the percentage of the U.S. noninstitutionalized population by age that reported having a disability. The percentage of individuals with a disability increases significantly at 65 years and again at 75 years. About 50 percent of individuals age 75 and older have a disability.

Table 2: Percentages of U.S. Population with and without Disabilities by Age Categories, 2023

Age Category	Total in Age Category	With a Disability		Without a Disability	
		Number	Percent	Number	Percent
Under 5 years	18,909,444	130,894	0.7%	18,778,550	99.3%
5 to 17 years	54,642,542	3,325,052	6.1%	51,317,490	93.9%
18 to 34 years	74,953,226	5,740,745	7.7%	69,212,481	92.3%
35 to 64 years	125,668,039	15,691,867	12.5%	109,976,172	87.5%
65 to 74 years	32,894,261	7,890,089	24.0%	25,004,172	76.0%
75 years and over	21,673,336	10,077,497	46.5%	11,595,839	53.5%
Total	328,740,848	42,856,144	13.0%	285,884,704	87.0%

Table Notes: 2023 ACS microdata.

Disabilities can occur at any age and may result from numerous factors including accidents, disease, developmental difficulties, occupational hazards, and military service. However, Table 2 illustrates that the prevalence of disability increases as age increases. Age is an important covariate of disability. Because of the numerous scientific and social advances made during the past century, life expectancies in the U.S. have increased. Individuals in the U.S. now live long enough to experience chronic and degenerative diseases instead of experiencing mortality at younger ages from infectious diseases. These degenerative diseases can be associated with many reported disabilities, especially for individuals in the older age categories.

Differences also exist regarding educational attainment. Table 3 illustrates that in 2023 a greater percentage of individuals 25 years of age and older with a disability had less than a high school diploma or equivalency compared to individuals 25 years of age and older without a disability. A greater percentage of individuals with a disability are high school graduates (or equivalency) than individuals without a disability. Only 20.1 percent of individuals with a disability have a bachelor's degree or higher compared to 38.3 percent of individuals without a disability. This is an increase from the 2017 data, which reflected 17.4 percent and 35.3 percent, respectively.

Table 3: Percentages of U.S. Population 25 Years of Age and Older with and without Disabilities by Education Level, 2023

Education Level	With a Disability	Without a Disability
Less than high school graduate	17.6%	9.0%
High school graduate (includes equivalency)	33.3%	24.6%
Some college or Associate's degree	29.0%	28.1%
Bachelor's degree or higher	20.1%	38.3%
Noninstitutionalized population 25 years and over	37,032,571	188,030,059

Table Notes: 2023 ACS microdata.

Table 4 details the specific types of disabilities reported by individuals in 2023. The reported disability categories are not mutually exclusive, and the same individual may report multiple disabilities. Over 20 million individuals, 48 percent of the noninstitutionalized population of individuals with disabilities, reported having an ambulatory difficulty. Approximately 39 percent of the population of individuals with disabilities reported cognitive difficulties, and 35.6 percent reported independent living difficulties. Hearing, vision, and self-care difficulties were the fourth, fifth, and sixth most frequently reported, representing 27.4, 18.5, and 18.4 percent, respectively.

Table 4: Number of Individuals in U.S. Reporting Each Type of Disability, 2023

Disability Type	Number	Percent of Population with Disabilities Reporting Difficulty
With an ambulatory difficulty	20,606,345	48.1%
With a cognitive difficulty	16,863,506	39.3%
With a hearing difficulty	11,742,011	27.4%
With an independent living difficulty	15,273,378	35.6%
With a self-care difficulty	7,894,250	18.4%
With a vision difficulty	7,945,036	18.5%
Total with a disability	42,856,144	

Table notes: 2023 ACS microdata. Reported disability categories are not mutually exclusive, and one individual can report having several disabilities. Survey participants were asked to report serious difficulties. Percentages represent the portion of the population of individuals with disabilities reporting each difficulty.

The specific types of reported disabilities are presented on the following page in Table 5 by age categories. Not all disability questions were asked of each age category. Only hearing and vision difficulties are reported for individuals under the age of five and 5 to 17 years. Additionally, independent living difficulties are only reported for individuals 18 years of age and older. The increased prevalence of disabilities can again be observed for individuals in the older age categories. Less than one percent of the noninstitutionalized population under five years old is reported as having a disability. Approximately six percent of individuals in the population 5 to 17 years old reported hearing and vision difficulties. Ambulatory, cognitive, and independent living difficulties are the most-reported disabilities of individuals between the ages of 18 and 64. Greater percentages of individuals 65 years of age and older report ambulatory, hearing, and independent living difficulties.

Table 5: Number of Individuals in U.S. by Age Category and Disability Type, 2023

Age Category and Disability	Total Number in the U.S. by Age Category	Number with Disability	Percent with Disability
Population under 5 years	18,909,444	130,894	0.7%
With a hearing difficulty		86,260	0.5%
With a vision difficulty		73,121	0.4%
Population 5 to 17 years	54,642,542	3,325,052	6.1%
With a hearing difficulty		312,836	0.6%
With a vision difficulty		520,139	1.0%
Population 18 to 64 years	200,621,265	21,432,612	10.7%
With an ambulatory difficulty		8,977,025	4.5%
With a cognitive difficulty		9,911,854	4.9%
With a hearing difficulty		3,999,016	2.0%
With an independent living difficulty		7,650,520	3.8%
With a self-care difficulty		3,381,846	1.7%
With a vision difficulty		4,086,913	2.0%
Population 65 years and over	54,567,597	17,967,586	32.9%
With an ambulatory difficulty		11,301,559	20.7%
With a cognitive difficulty		4,358,647	8.0%
With a hearing difficulty		7,343,899	13.5%
With an independent living difficulty		7,250,644	13.3%
With a self-care difficulty		3,906,626	7.2%
With a vision difficulty		3,264,863	6.0%

Table notes: 2023 ACS microdata. Not all disability questions are asked to the individuals in each age category. Survey participants are asked to report serious difficulties and could report having several disabilities.

Recent National Labor Force Trends for Individuals with Disabilities

Labor force trends can be illustrated through unemployment, labor force participation, and employment rates. The unemployment rate for individuals with disabilities is higher than for individuals without disabilities. In 2023, the average annual unemployment rate for individuals without a disability was 3.5 percent compared to 7.2 percent for individuals with a disability. Figure 3 illustrates that the annual unemployment rate for individuals with disabilities was higher than for individuals without disabilities from 2014–2023. Notably, between 2019 and 2020, the unemployment rate for people with disabilities increased dramatically due to the COVID-19 pandemic.

Figure 3: National Unemployment Rates for Individuals with and without Disabilities, 2014–2023

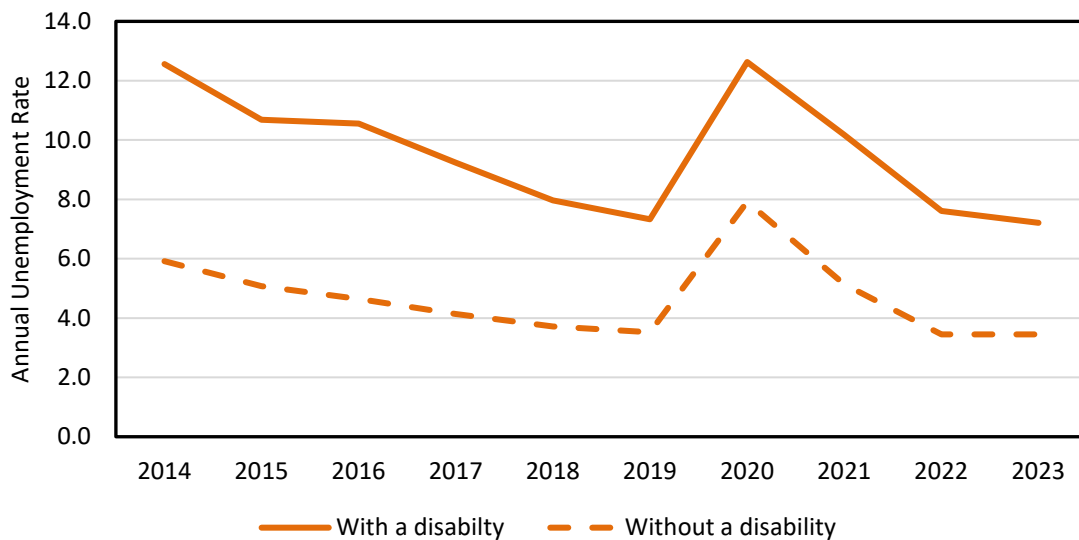

Figure notes: Annual unemployment rates are not seasonally adjusted. The rates are for individuals with and without disabilities who are 16 years of age and older. Data are from BLS.

Differences in unemployment also exist between genders. Figure 4 illustrates the unemployment rates for both men and women between the ages of 16 and 64 with and without disabilities. Between 2014 and 2023, men without disabilities generally had the highest unemployment rates. The lowest unemployment rate was for women without disabilities.

Figure 4: National Unemployment Rates for Men and Women between the Ages of 16 and 64 with and without Disabilities, 2014–2023

Figure notes: Annual unemployment rates are not seasonally adjusted. The rates are for individuals with and without disabilities who are 16 to 64 years old. Data are from BLS.

Individuals with a disability have a lower labor force participation rate than individuals without disabilities. Individuals are considered to be labor force participants if they are either employed or unemployed and seeking work. Specific examples of people who are not labor force participants include retired people, students, individuals taking care of children or other family members, and discouraged job seekers. In 2023, 75.8 percent of all individuals with disabilities were not participating in the labor force compared to 31.9 percent of individuals without disabilities (BLS, 2023). However, many individuals with disabilities are over the age of 65 and may be retired or not seeking work.

To better understand labor participation rates, Figure 5 illustrates the 2023 labor force participation rates for men and women over the age of 16 with and without disabilities. Both the numbers of unemployed and employed individuals are illustrated. Men with disabilities had a 26.7 percent labor force participation rate compared to the 73.8 percent rate of men without disabilities. Women with disabilities had a 22 percent labor force participation rate compared to the 62.6 percent rate of women without disabilities. Because Figure 5 illustrates labor force participation rates, the remainder of each group can be interpreted as the portion not participating in the labor force (for instance, because 26.7 percent of men with disabilities were labor force participants, 73.3 percent were not participants).

Figure 5: National Labor Force Participation Rates for Men and Women over the Age of 16 with and without Disabilities, 2023

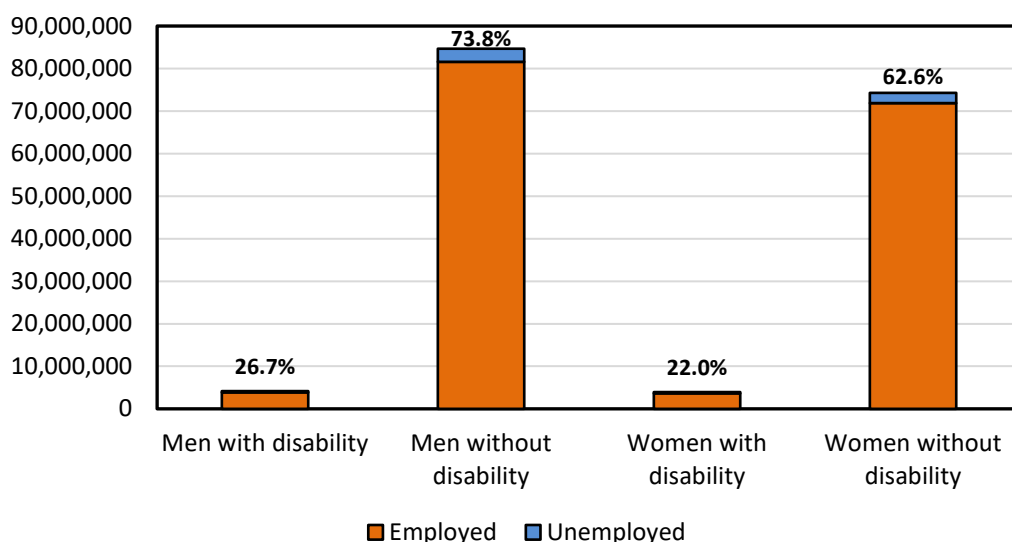

Figure notes: Percentages indicate the 2023 annual labor force participation rate for each group. The rates are for individuals who are 16 and over. Rates are specific to each group and cannot be added to produce gender specific rates. Data are from BLS.

In 2023, 22.5 percent of persons with a disability were employed compared to 65.8 percent of individuals without disabilities. Workers with a disability were more likely to be employed part time than those with no disability. Among those with a disability, approximately 29 percent usually worked part time in 2023, compared with 16.2 percent of workers without a disability. (BLS, 2024).

Individuals with Disabilities in Texas

According to the ACS microdata estimates used in this section, 12 percent of the noninstitutionalized population in Texas (3,519,540 individuals)¹ had a disability in 2023. Additionally, individuals with disabilities accounted for approximately seven percent of the civilian labor force 16 years of age and older in 2023 (1,089,109 individuals). In this section, a description of the population with disabilities in Texas focuses on population trends, demographic characteristics, labor force characteristics, and regional distribution.

Population Trends of Individuals with Disabilities in Texas

Figure 6 illustrates the number of individuals with disabilities in Texas and the percentage of individuals with disabilities in the entire population of Texas between 2014 and 2023. The number of Texans with disabilities increased from 2014 to 2023. In 2014, 12 percent of the noninstitutionalized population in Texas (2,978,113 individuals) had disabilities. The number of individuals with disabilities in Texas increased to 3,519,540 individuals in 2023. However, because the population of Texas grew rapidly over the same period, individuals with disabilities accounted for a similar percentage of the population for all 10 years.

Figure 4: Number of Individuals with Disabilities in Texas and Percentage of Population, 2014–2023

Figure notes: The 2014 to 2023 data are from ACS microdata. Percentages represent the portion of the total noninstitutionalized population with disabilities.

¹ The number reported in this study omits the institutionalized group quarters population surveyed by the ACS because of small sample sizes at the state level.

Regional Distribution

The population of individuals with disabilities in Texas is not evenly distributed across the state. Appendix C contains thematic maps that illustrate the population of individuals with disabilities in each Local Workforce Development Area (LWDA). Appendix D illustrates the population of individuals with disabilities in each of the Texas Workforce Commission, Vocational Rehabilitation (VR) regions, including labor force participation. Appendix E includes tables for each LWDA that detail the number of individuals with self-care, hearing, vision, independent living, ambulatory, and cognitive difficulties in each local workforce area's counties. Appendix F contains tables for each LWDA that detail the labor force participation of individuals with disabilities ages 16 and over in each local workforce area's counties. The maps, charts, and tables in Appendices C, D, E, and F use disability estimates from the ACS microdata. For more information on how county estimates were calculated, see the explanation provided in the Data Sources section of this report.

Similar to the disabilities data at the national level, LWDAs with large populations generally have the largest numbers of individuals with disabilities. The Gulf Coast Local Workforce Development Area, consisting of 13 counties around the Houston area, has the most individuals with disabilities in the state: 779,239. The next largest population of individuals with disabilities (400,128 individuals) is in the Alamo Local Workforce Development Area. The North Central and Greater Dallas LWDAs contain the third and fourth largest populations, with 324,650 and 274,553, respectively.

Harris County, the most populous county in the state, is home to 501,952 individuals with disabilities. The counties with the largest number of individuals with disabilities in 2023 were Harris, Bexar, Dallas, Tarrant, Travis, El Paso, Hidalgo, Denton, Collin, and Fort Bend. Over half (53.5 percent) of the state's population of individuals with disabilities resided in these 10 counties.

Demographic Characteristics of Individuals with Disabilities in Texas

The population of individuals with disabilities in Texas can be described by analyzing key demographic variables. Figure 7 indicates that in 2023, 12.1 percent of females (1,787,863 individuals) and 11.9 percent of males (1,731,677 individuals) reported having a disability.

Figure 5: Number and Percentage of Individuals with Disabilities in Texas by Gender, 2023

Figure notes: 2023 ACS microdata.

Table 6 illustrates the percentages of individuals with and without disabilities by race and ethnicity. Approximately 14 percent of Whites have a disability. Whereas 13.7 percent of African Americans, 10.2 percent of Hispanics, 12.8 percent of individuals in the Other race/ethnicity category, and 6.5 percent of Asians have a disability.

Table 6: Race and Ethnicity of Texans with and without Disabilities, 2023

Race/Ethnicity	Total	With a Disability		Without a Disability	
		Number	Percent	Number	Percent
White	11,694,601	1,631,820	14.0%	10,062,781	86.0%
African American	3,442,706	471,893	13.7%	2,970,813	86.3%
Hispanic	11,580,017	1,185,430	10.2%	10,394,587	89.8%
Asian	1,551,896	101,229	6.5%	1,450,667	93.5%
Other	1,011,539	129,168	12.8%	882,371	87.2%
Total	29,280,759	3,519,540	12.0%	25,761,219	88.0%

Table notes: 2023 ACS microdata. Percentages indicate the portion of each race/ethnicity category with and without disabilities. The race and ethnicity categories are mutually exclusive and include Hispanics of one or more races, Whites (exclusive), African Americans (exclusive), Asians (exclusive), and other (more than one race not including Hispanic).

On average, the population of individuals with disabilities in Texas is older than the population of individuals without disabilities. Table 7 illustrates the percentages of the noninstitutionalized population with and without a disability in each age category. Less than one percent of Texans under the age of five had a disability. Approximately seven percent of individuals between the ages of 18 and 34 had a disability. The prevalence of disability increases as age increases. For Texans 75 and older, approximately 50 percent had a disability.

Table 2: Percentages of Texas Population with and without Disabilities by Age Categories, 2023

Age Categories	Total	With a Disability		Without a Disability	
		Number	Percent	Number	Percent
Under 5 years	1,926,965	13,221	0.7%	1,913,744	99.3%
5 to 17 years	5,546,067	345,308	6.2%	5,200,759	93.8%
18 to 34 years	7,039,876	514,225	7.3%	6,525,651	92.7%
35 to 64 years	10,951,504	1,289,658	11.8%	9,661,846	88.2%
65 to 74 years	2,369,851	638,068	26.9%	1,731,783	73.1%
75 years and over	1,446,496	719,060	49.7%	727,436	50.3%
Total	29,280,759	3,519,540	12.0%	25,761,219	88.0%

Table notes: 2023 ACS microdata.

Differences in the prevalence of disability by age can also be observed when considering gender. Figure 8 illustrates the percentages of males and females with disabilities in each age category. Greater percentages of males have disabilities in the 5 to 17, 18 to 34, 35 to 64, and 65 to 74-year-old age categories. A larger percentage of females in the 75-year-old and over category reported having a disability.

Figure 6: Percent of Individuals with Disabilities by Age and Gender in Texas, 2023

Figure notes: 2023 ACS microdata. Percentages indicate the portion of men and women in each age category reporting a disability.

Differences between individuals with and without disabilities can also be observed by level of educational attainment. Table 8 illustrates that in 2023, approximately 23 percent of individuals 25 years of age and older with less than a high school diploma or equivalency had a disability. Approximately nine percent of individuals with a bachelor's degree or higher had a disability.

Table 3: Percentages of Texans with and without Disabilities by Education Level, 2023

Education Level	Total Number of Individuals Age 25 and Over in Each Education Category	With a Disability		Without a Disability	
		Number	Percent	Number	Percent
Less than high school graduate	2,678,091	606,808	22.7%	2,071,283	77.3%
High school graduates (includes equivalency)	4,572,660	865,345	18.9%	3,707,315	81.1%
Some college or Associate's degree	5,364,698	885,347	16.5%	4,479,351	83.5%
Bachelor's degree or higher	6,356,310	590,179	9.3%	5,766,131	90.7%
Noninstitutionalized population 25 years and over	18,971,759	2,947,679	15.5%	16,024,080	84.5%

Table notes: 2023 ACS microdata. Percentages represent the portion of the 25-years-old and older population with and without disabilities at each education level.

The educational level of individuals with disabilities who are 25 years of age and older has changed over time. Figure 9 illustrates the longitudinal trend in educational attainment from 2014 to 2023. Approximately 29 percent of this population are less than high school graduates, while 14.3 percent have a bachelor's degree or higher. Subsequently, the percentage of high school graduates decreased to 20.6 percent, while bachelor's degrees or higher increased to 20.6 percent in 2023.

Figure 9: Percentages of Texans with Disabilities by Education Level, 2014–2023

Figure notes: The 2014 to 2023 data are from ACS microdata. Longitudinal data on the educational attainment of individuals with disabilities, 2014–2023.

Table 9 illustrates the specific types of disabilities reported by Texans in 2023. The reported disability categories are not mutually exclusive, and the same individual could report multiple disabilities. Over 1.6 million individuals, 47 percent of the population of individuals with disabilities, reported having an ambulatory difficulty. Approximately 39 percent of the population of individuals with disabilities reported cognitive difficulties, and 33.2 percent reported independent living difficulties. Hearing, vision, and self-care difficulties were the fourth, fifth, and sixth most frequently reported.

Table 4: Number of Individuals in Texas Reporting Each Type of Disability, 2023

Disability Type	Number	Percent of Population with Disabilities Reporting Difficulty
With an ambulatory difficulty	1,653,129	47.0%
With a cognitive difficulty	1,361,946	38.7%
With a hearing difficulty	969,226	27.5%
With an independent living difficulty	1,168,008	33.2%
With a self-care difficulty	644,356	18.3%
With a vision difficulty	770,253	21.9%
Total with a disability	3,519,540	

Table notes: 2023 ACS microdata. Reported disability categories are not mutually exclusive, and one individual could report having several disabilities. Percentages represent the portion of the population of individuals with disabilities reporting each difficulty.

The specific types of reported disabilities are presented in Table 10 by age categories. As previously noted, not all disability questions were asked of each age category. The increased prevalence of disabilities can again be observed for individuals in the older age categories. Less than one percent of the population under five years old is reported as having a disability. Approximately six percent of individuals between the ages of 5 and 17 reported hearing and vision difficulties. For individuals between the ages of 18 and 34, cognitive difficulties (4.5 percent) were the most frequently reported, followed by independent living (2.6 percent), vision (1.7 percent), and ambulatory (1.2 percent) difficulties. For all age categories over the age of 35, the most frequently reported difficulty was ambulatory. For individuals between the ages of 35 and 64, the second and third most frequently mentioned difficulties were cognitive and independent living, respectively. Hearing and independent living difficulties were the second and third most frequently mentioned for individuals in the 65- to 74- year-old age category. For individuals over 75, the second most reported difficulty was independent living, and the third most reported was hearing.

Table 10: Number of Individuals in Texas by Age Category and Disability Type, 2023

Age Category and Disability	Total Number in Texas by Age Category	Number with Disability	Percent with Disability
Population under 5 years	1,926,965	13,221	0.7%
With a hearing difficulty		9,404	0.5%
With a vision difficulty		7,757	0.4%
Population 5 to 17 years	5,546,067	345,308	6.2%
With a hearing difficulty		33,567	0.6%
With a vision difficulty		67,290	1.2%
Population 18 to 34 years	7,039,876	514,225	7.3%
With an ambulatory difficulty		85,892	1.2%
With a cognitive difficulty		314,269	4.5%
With a hearing difficulty		69,768	1.0%
With an independent living difficulty		184,763	2.6%
With a self-care difficulty		56,481	0.8%
With a vision difficulty		116,518	1.7%
Population 35 to 64 years	10,951,504	1,289,658	11.8%
With an ambulatory difficulty		650,410	5.9%
With a cognitive difficulty		460,827	4.2%
With a hearing difficulty		299,856	2.7%
With an independent living difficulty		407,173	3.7%
With a self-care difficulty		224,657	2.1%
With a vision difficulty		295,071	2.7%
Population 65 to 74 years	2,369,851	638,068	26.9%
With an ambulatory difficulty		397,892	16.8%
With a cognitive difficulty		134,681	5.7%
With a hearing difficulty		229,159	9.7%
With an independent living difficulty		194,835	8.2%
With a self-care difficulty		113,010	4.8%
With a vision difficulty		133,870	5.6%
Population 75 years and over	1,446,496	719,060	49.7%
With an ambulatory difficulty		484,235	33.5%
With a cognitive difficulty		193,457	13.4%
With a hearing difficulty		327,472	22.6%
With an independent living difficulty		348,781	24.1%
With a self-care difficulty		191,909	13.3%
With a vision difficulty		149,747	10.4%

Table notes: 2023 ACS microdata. One individual could report having several disabilities

Labor Force Characteristics of Individuals with Disabilities in Texas

The demographic analyses presented in this subsection focus on individuals with disabilities in Texas who are in the civilian labor force, either employed or unemployed and seeking work. Individuals with disabilities in Texas who are on active duty with the military are not included in the analyses presented in this subsection. The estimated numbers of labor force participants with disabilities by each county in the local workforce development areas and VR region are illustrated in Appendices F and D respectively.

In 2023, 14,897,667 individuals in Texas were labor force participants. Over one million labor force participants had a disability. Approximately 54 percent of labor force participants with disabilities in Texas were male (578,711 individuals) and approximately 46 percent (510,398 individuals) were female. Table 11 illustrates the race and ethnicity of employed and unemployed labor force participants with and without disabilities. More than seven percent of employed labor force participants in the White race/ethnicity category had a disability. Seven percent of the African American employed labor force participants and nine percent of the other category employed labor force participants had a disability. Approximately six percent of the Hispanic category employed labor force participants had a disability, and 3.4 percent of the Asian employed labor force participants had a disability.

Table 11: Race and Ethnicity of Texas Labor Force Participants with and without Disabilities, 2023

Race/Ethnicity	Total Labor Force Participants in Each Race or Ethnicity Category	Employed with a Disability		Unemployed with a Disability		Employed without a Disability		Unemployed without a Disability	
		Number	Percent	Number	Percent	Number	Percent	Number	Percent
White	6,117,358	441,681	7.2%	39,280	0.6%	5,425,343	88.7%	211,054	3.5%
African American	1,829,862	128,179	7.0%	20,754	1.1%	1,552,200	84.8%	128,729	7.0%
Hispanic	5,652,307	347,344	6.1%	35,286	0.6%	5,000,296	88.5%	269,381	4.8%
Asian	844,508	28,447	3.4%	2,244	0.3%	783,198	92.7%	30,619	3.6%
Other	453,632	40,667	9.0%	5,227	1.2%	384,509	84.8%	23,229	5.1%
Total	14,897,667	986,318	6.6%	102,791	0.7%	13,145,546	88.2%	663,012	4.5%

Table notes: 2023 ACS microdata. The race and ethnicity categories include Hispanics of one or more races, Whites (exclusive), African Americans (exclusive), Asians (exclusive), and other (more than one race not including Hispanic).

In 2023, the average age of a labor force participant with a disability in Texas was 46 years old. Table 12 on the following page illustrates that 106,125 individuals with disabilities between the ages of 16 and 24 were employed labor force participants in 2023 and accounted for 5.1 percent of the age-specific labor force. The largest number of employed labor force participants with disabilities were between the ages of 25 to 64 and comprise 6.1 percent of labor force participants in that age range. Between the ages of 65 to 74, employed labor force participants with disabilities accounted for 16.3 percent of the age-specific labor force.

Table 12: Texas Labor Force Participants with and without Disabilities by Age Category, 2023

Age Categories	Total Labor Force Participants in Each Age Category	Employed with a Disability		Unemployed with a Disability		Employed without a Disability		Unemployed without a Disability	
		Number	Percent	Number	Percent	Number	Percent	Number	Percent
16 to 24 years	2,079,177	106,125	5.1%	20,043	1.0%	1,753,864	84.4%	199,145	9.6%
25 to 64 years	12,015,316	735,010	6.1%	74,206	0.6%	10,764,640	89.6%	441,460	3.7%
65 to 74 years	682,428	111,106	16.3%	6,734	1.0%	545,202	79.9%	19,386	2.8%
75 years and over	120,746	34,077	28.2%	1,808	1.5%	81,840	67.8%	3,021	2.5%
Total	14,897,667	986,318	6.6%	102,791	0.7%	13,145,546	88.2%	663,012	4.5%

Table notes: 2023 ACS microdata.

Figure 10 illustrates the longitudinal data of individuals with disabilities age 16 and over who participated in the labor force from 2014 to 2023. In 2014, more than 800,000 individuals with disabilities were labor force participants accounting for approximately 30 percent of this segment of the population. The labor force participants increased to more than one million accounting for approximately 34 percent of the population in 2023.

Figure 10: Individuals with Disabilities Civilian Labor Force Participants Aged 16 and over in Texas, 2014–2023

Figure notes: The 2014 to 2023 data are from ACS microdata. Labor force participants longitudinal data of individuals with disabilities, 2014–2023.

Figure 11 illustrates the longitudinal employment rate of individuals with and without disabilities from 2014 to 2023. In 2014, 85.6 percent of the people with disabilities in the labor market were employed. Subsequently, the employment rate grew practically in parallel with the employment rate of individuals without disabilities. In 2023, the employment rate of individuals with disabilities was 90.6 percent.

Figure 11: Employment Rate of Individuals with and without Disabilities in Texas, 2014–2023

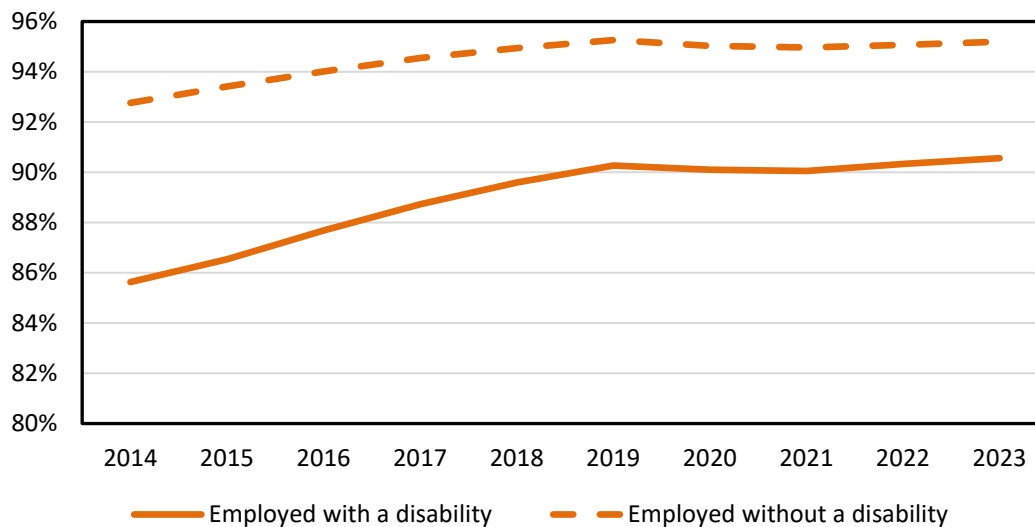

Figure notes: The 2014 to 2023 data are from ACS microdata. Employment rate longitudinal data of individuals with and without disabilities, 2014–2023.

Table 13 represents the types of disabilities reported by individuals according to labor force participation. Approximately 22 percent of individuals with disabilities who worked full time reported ambulatory difficulties, and approximately 22 percent reported hearing difficulties. The most frequently reported difficulties for part-time workers were cognitive (27.2 percent), ambulatory (22.4 percent), and hearing (15.3 percent). Individuals who were not in the labor force reported ambulatory (60.9 percent), independent living (46.1 percent), and cognitive (36.4 percent) difficulties.

Table 13: Types of Disabilities Reported by Individuals Aged 16 and over by Labor Force Participation, 2023

Disability Type	Full-Time Workers		Part-Time Workers		Not in Labor Force	
	Number	Percent	Number	Percent	Number	Percent
Ambulatory difficulty	243,176	22.1%	123,144	22.4%	1,258,433	60.9%
Cognitive difficulty	241,592	21.9%	150,125	27.2%	751,823	36.4%
Hearing difficulty	243,950	22.2%	84,438	15.3%	602,904	29.2%
Independent living difficulty	119,412	10.8%	84,498	15.3%	952,963	46.1%
Self-care difficulty	51,952	4.7%	29,116	5.3%	511,608	24.7%
Vision difficulty	201,241	18.3%	79,635	14.5%	428,363	20.7%

Table notes: 2023 ACS microdata. The same individual may report multiple disabilities.

Labor force participants with disabilities held various jobs in numerous industries throughout Texas in 2023. Table 14 illustrates the percentages of labor force participants with and without disabilities by general category of work, also referred to as *class of worker*. Approximately seven percent of the employees of private, for-profit companies had disabilities in 2023. Approximately eight percent of federal, state, or local government employees had a disability. The total number of Texas labor force participants with disabilities was 1,089,109 (employed full time, employed part time, and unemployed) in 2023. The total number of Texas labor force participants without disabilities was 13,808,558.

Table 14: Class of Worker for Texas Labor Force Participants with and without Disabilities, 2023

Class of Worker	Total Number of Labor Force Participants in Each Class of Workers	Labor Force Participants with a Disability		Labor Force Participants without a Disability	
		Number	Percent	Number	Percent
Employee of a private for-profit company	10,343,123	716,121	6.9%	9,627,002	93.1%
Employee of federal, state, local government	2,016,902	157,291	7.8%	1,859,611	92.2%
Self-employed in own business, professional practice, or farm	1,526,943	125,587	8.2%	1,401,356	91.8%
Employee of a private not-for-profit organization	862,606	70,270	8.1%	792,336	91.9%
Unemployed†	112,412	15,258	13.6%	97,154	86.4%
Working without pay in family business or farm	35,681	4,582	12.8%	31,099	87.2%
Total	14,897,667	1,089,109	7.3%	13,808,558	92.7%

Table notes: 2023 ACS microdata.

Class of worker categorizes people according to the type of ownership of the employing organization. Assigning class of worker categories is, in most cases, independent of industry and occupation. Additionally, class of worker refers to the type of work normally done, or the work performed most regularly.

†Refers to individuals with or without a disability that are, "Unemployed and last worked 5 years ago or earlier or never worked" (ACS PUMS Data Dictionary, 2023).

Table 15 on the following page illustrates the 20 Texas industries in which the highest percentages of labor force participants with disabilities were employed in 2023. These 20 industries employed 46.3 percent of labor force participants with disabilities in the state. The industry that employed the largest number of labor force participants with disabilities (81,735 individuals) was construction. The data in Table 15 are presented differently from the other tables in this report. The percentages indicate the portion of Texas civilian labor force participants with and without disabilities employed in each industry. For example, 7.5 percent of Texas labor force participants with disabilities were employed by the construction industry in 2023. Approximately seven percent of Texas labor force participants with disabilities (76,295 individuals) worked in the food services and drinking places industry, the formerly restaurants and other food services industry. And the third largest number of labor force participants with disabilities (62,852 individuals) worked in elementary and secondary schools.

Table 5: Top 20 Industries Employing Individuals with and without Disabilities in Texas, 2023

Industry	Labor Force Participants with a Disability		†Labor Force Participants without a Disability	
	Number	Percent	Number	Percent
Construction	81,735	7.5%	1,202,968	8.7%
Elementary and Secondary Schools	62,852	5.8%	903,352	6.5%
Food Services and Drinking Places	76,295	7.0%	884,841	6.4%
Hospitals	32,457	3.0%	509,222	3.7%

Table Total	504,585	46.3%	6,787,835	49.2%

Table notes: Data are from 2023 ACS microdata. Only the top 20 industries are included in this table. Percentages indicate the portion of Texas civilian labor force participants with and without disabilities in the top 20 industries.

†Indicates that the labor force participants without a disability is used as the ranking column for both categories.

Employed individuals with disabilities held different positions across the different industries in Texas. Similarly, Table 16 on the following page shows that approximately 35 percent of employed individuals with disabilities in the state held these 20 positions in 2023. Approximately three percent (27,399 individuals) were employed as driver/sales workers and truck drivers, followed by a total of 26,323 individuals (2.7 percent) were employed as managers, and 24,643 individuals (2.5 percent) were employed as customer service representatives.

Table 16: Top 20 Occupations of Individuals with Disabilities in Texas, 2023

Occupation	Employed with a Disability	
	Number	Percent
Driver/Sales Workers and Truck Drivers	27,399	2.8%
Managers	26,323	2.7%
Customer Service Representatives	24,643	2.5%
Retail Salespersons	23,940	2.4%
Cashiers	23,720	2.4%
Janitors and Building Cleaners	22,180	2.2%
Laborers and Freight, Stock, and Material Movers	18,989	1.9%
Cooks	17,790	1.8%
First-Line Supervisors of Retail Sales Workers	17,767	1.8%
Elementary and Middle School Teachers	16,189	1.6%
Personal Care Aides	15,096	1.5%
Secretaries and Administrative Assistants	14,677	1.5%
Registered Nurses	12,847	1.3%
Stockers and order Fillers	12,815	1.3%
Construction Laborers	12,473	1.3%
Waiters and Waitresses	12,340	1.3%
Maids and Housekeeping Cleaners	12,059	1.2%
Security Guards and Gambling Surveillance Officers	9,871	1.0%
Receptionists and information Clerks	9,763	1.0%
Office Clerks	9,448	1.0%
Table Total	340,329	34.5%

Table notes: Data are from 2023 ACS microdata. Only the top 20 occupations are included in this table.

Percentages indicate the portion of employed with disabilities in the top 20 occupations in Texas.

Average Salaries of Employed Texans with Disabilities

This subsection provides data only for individuals age 25 and over who are employed. It excludes unemployed individuals who have no or very little income. In 2023, employed Texans with disabilities earned an average salary of \$51,983 (inflation-adjusted for 2023) compared to \$72,345 for employed Texans without disabilities. Salary differences exist within the population of labor force participants with disabilities based on numerous demographic factors. On average, employed male Texans with disabilities earned \$61,203 whereas females earned \$41,066. Additionally, salaries varied depending on the level of educational attainment. At every educational level, the average salaries of individuals with disabilities were lower than the salaries of individuals without disabilities, and the differences between salaries were larger as educational levels increased. Table 17 illustrates that employed Texans with disabilities who had less than a high school diploma earned an average yearly salary of \$30,491 compared to the average salary of \$35,154 for employed Texans without disabilities. The average yearly salary earned by employed Texans with disabilities who had a bachelor's degree or higher was \$76,826 compared to \$103,369 for employed Texans without disabilities.

Table 17: Average Yearly Salary for Labor Force Participants with and without Disabilities by Educational Attainment, 2023

Education Level	Employed Individuals with a Disability		Employed Individuals without a Disability	
	Percent at Education Level	Average Yearly Salary	Percent at Education Level	Average Yearly Salary
Less than high school graduate	13.0%	\$30,491	11.1%	\$35,154
High school graduates (includes equivalency)	24.5%	\$39,046	21.8%	\$46,375
Some college or associate's degree	35.3%	\$48,458	28.2%	\$57,383
Bachelor's degree or higher	27.2%	\$76,826	38.9%	\$103,369
Employed Age 25 and over	880,193	*	11,391,682	*

Table notes: 2023 ACS microdata. Salaries are inflation-adjusted for 2023.

Employed Texans with disabilities who worked full time earned an average salary of \$63,740, whereas part-time workers earned \$20,595. Because individuals can report having multiple disabilities, analyzing any possible associations between income and specific disability is challenging. Table 17 illustrates the disabilities reported by Texas labor force participants in three different salary groups. The salary groups were constructed to contain an approximately equal number of individuals. The salary group with the lower income range consists of individuals earning \$0 to \$8,400 in a year. The middle salary range is from \$8,401 to \$30,000, and the higher income range is \$30,001 and higher. The largest percentages of labor force participants in the lower salary range reported cognitive and ambulatory difficulties. More individuals in the middle salary range reported ambulatory and cognitive difficulties. Greater percentages of individuals in the higher salary range reported hearing and ambulatory difficulties. Looking at differences between the salary groups, similar percentages of individuals reported many of the difficulties.

Table 18: Disabilities Reported by Texas Labor Force Participants by Salary Range, 2023

Disability Type	Lower Range Salary		Middle Range Salary		Higher Range Salary	
	Number	Percent	Number	Percent	Number	Percent
Ambulatory difficulty	28,202	23.6%	80,686	25.2%	159,973	23.1%
Cognitive difficulty	29,094	24.4%	70,251	21.9%	135,572	19.6%
Hearing difficulty	18,843	15.8%	57,666	18.0%	173,252	25.0%
Independent living difficulty	18,352	15.4%	38,878	12.1%	65,604	9.5%
Self-care difficulty	6,680	5.6%	15,457	4.8%	31,435	4.5%
Vision difficulty	18,157	15.2%	57,330	17.9%	125,920	18.2%
Total in Salary Range	119,328	*	320,268	*	691,756	*

Table notes: 2023 ACS microdata. Salaries are inflation-adjusted for 2023. Individuals may report more than one disability. The lower income range is from \$0 to \$8,400; the middle range is from \$8,401 to \$30,000; and the higher income range is \$30,001 and higher.

Supplemental Security Income

Supplemental security income (SSI) provides cash to meet basic needs for food, clothing, and shelter for the blind, aged, and individuals with disabilities who have little or no income. In Texas, 371,164 individuals age 16 and older with a disability received SSI in 2023 compared to 386,202 individuals in 2012 (TWIC, 2014a). The average yearly SSI payment for individuals age 16 and over with disabilities was \$10,203 (inflation-adjusted for 2023). Many of the individuals who received SSI were not labor force participants.

Out of the 1,089,109 labor force participants with disabilities, 28,809 individuals (2.6 percent) received SSI in 2023. Out of the 2,122,593 individuals with disabilities who did not participate in the labor force, 342,355 (16.1 percent) received SSI in 2023. Figure 12 indicates the percentages of Texas civilian labor force participants and nonparticipants who received SSI in 2023 by disability type. Greater percentages of individuals with disabilities who did not participate in the labor force received SSI in 2023. Out of the labor force participants with a disability who received SSI, 4.1 percent (15,092 individuals) reported having a cognitive difficulty. Roughly four and half percent of labor force participants with self-care difficulties (3,449 individuals) received SSI. About five and a half percent (10,506 individuals) of labor force participants with independent living difficulties received SSI in 2023. The smallest percentage of individuals receiving SSI (5,672 individuals) had hearing difficulties.

Figure 12: Texas Labor Force Participants and Nonparticipants with Disabilities Receiving SSI by Disability Type, 2023

Figure notes: 2023 ACS microdata. Percentages represent the portion of labor force participants with each difficulty who received SSI in 2023. Data excludes individuals reporting \$0 SSI.

Texas Veterans and Disabilities

The issue of disabilities is particularly relevant for the veteran population. On average, the veteran population is older than the nonveteran population, and the likelihood of developing a disability increases with age. Additionally, because of the rigors associated with military service, numerous veterans have service-connected disabilities. A more thorough analysis of the Texas veteran population is available in the veteran's demographic report (TWIC, 2024b).

ACS data indicate that in 2023, approximately 28.6 percent of all Texas veterans report having some type of disability (427,999 individuals) compared to 13.5 percent of the age 18 and older nonveteran population (2,733,012 individuals). These reported disabilities may not necessarily be the consequence of military service. Veterans with a service-connected injury or illness incurred or aggravated during active military service are assessed and assigned a disability rating. Depending on the severity of the disability rating, veterans may receive disability benefits in the form of monthly compensation.

Table 19 illustrates the percentage of Texas veterans within the different ranges of disability ratings. Three percent of Texas veterans have a zero percent disability rating, indicating that the service-related injury does not impair the veteran. Roughly 21 percent of Texas veterans with a rating have a disability rating of 10 or 20 percent. The majority of veterans with a service-connected rating (47.1 percent) have a disability rating of 70 to 100 percent.

Table 19: Percentages of All Texas Veterans with Service-Connected Disability Ratings, 2023

Service-Connected Disability Ratings	Number	Percent
0 percent	14,887	3.0%
10 or 20 percent	104,341	20.7%
30 or 40 percent	62,741	12.5%
50 or 60 percent	65,671	13.1%
70 percent or higher	237,060	47.1%
Rating not reported	18,501	3.7%
Total	503,201	100%

Table notes: 2023 ACS microdata.

Texas Youth with Disabilities

This subsection focuses on Texas youth—ages 16 to 24—with disabilities. Data on these youth are from ACS microdata for the civilian noninstitutionalized population. Generally, the transition to adulthood for youth with disabilities is challenging (Stewart et al., 2014). Transitions into careers and postsecondary education for youth with disabilities can be particularly difficult. Some youth may feel that their career choices are limited because of the accommodations that they require, while others may be discouraged from pursuing further postsecondary education, thus limiting career opportunities.

The most accurate method of illustrating the transition into postsecondary education or into a career from high school or college requires a longitudinal dataset in which the same individuals are followed over numerous years. However, the ACS dataset used in this subsection does not include longitudinal data. Therefore, the comparison of youth with and without disabilities is limited to a specific point in time. Of the 3,700,705 Texas youth, 272,614 (7.4 percent) reported having a disability in 2023. Table 20 illustrates that 7.3 percent of youth attending secondary school in 2023 had a disability. However, secondary school attendance is normally compulsory until age 18 in Texas. Of the Texas youth attending college (including undergraduate and graduate education), 5.5 percent had disabilities in 2023.

Table 20: School Attendance of Texas Youth with and without Disabilities, 2023

School Attendance	Total Number of Youth Between Ages 16 and 24 in Each Attendance Category	Youth with Disabilities		Youth without Disabilities	
		Number	Percent	Number	Percent
Currently attending secondary school	1,068,544	78,228	7.3%	990,316	92.7%
Currently attending college	1,054,540	57,888	5.5%	996,652	94.5%
Not attending school	1,577,621	136,498	8.7%	1,441,123	91.3%
Total	3,700,705	272,614	7.4%	3,428,091	92.6%

Table notes: 2023 ACS microdata. Percentages represent the portion of youth with and without disabilities between the ages of 16 and 24 attending secondary school and college (including undergraduate or graduate).

Many youths between the ages of 16 and 24 are not included in labor force participation data because they are still in school. Table 21 indicates that 6.1 percent of labor force participants between the ages of 16 and 24 had a disability in 2023. Among the Texas youth not participating in the labor force in 2023, approximately nine percent had a disability. The average salary for youth labor force participants (employed) with disabilities was \$17,447 compared to \$20,456 for youth labor force participants without disabilities.

Table 21: Labor Force Participation of Texas Youth with and without Disabilities, 2023

Labor Force Participation	Total Number of Youth Between Ages 16 and 24	Youth with Disabilities		Youth without Disabilities	
		Number	Percent	Number	Percent
In labor force	2,079,177	126,168	6.1%	1,953,009	93.9%
Not in labor force	1,576,322	144,194	9.1%	1,432,128	90.9%
Total	3,655,499	270,362	7.4%	3,385,137	92.6%

Table notes: 2023 ACS microdata.

Even though youth with disabilities report similar aspirations for the future as youth without disabilities, youth with disabilities often have limited opportunities to participate in educational and career planning services (Hitchings et al., 2001). Transition planning and services for youth with disabilities are necessary early in high school to maximize cost-effectiveness and accessibility (Izzo & Lamb, as cited in Stewart et al., 2008). These services will enhance the chance for a successful transition into postsecondary education and a career.

Table 22 illustrates school enrollment and employment status for youth with and without disabilities. As seen in Column C, greater percentages of youth without disabilities are enrolled in secondary or postsecondary education for every year of age. Column E indicates that greater percentages of youth without disabilities are also employed full time compared to youth with disabilities. Additionally, greater percentages of youth without disabilities who are employed full time are also enrolled in secondary or postsecondary education (Column G). Column I illustrates that greater percentages of youth without disabilities are also employed part time compared to youth with disabilities. Greater percentages of youth without disabilities who are employed part time are also enrolled in secondary or postsecondary education (Column K).

Table 22: School Enrollment and Employment Status of Texas Youth 16 to 24 Years of Age with and without Disabilities, 2023

Youth with Disabilities

Table notes: 2023 ACS microdata.

Concluding Comments

This study provides a demographic overview of individuals with disabilities for the U.S. A demographic description of the U.S. population of individuals with disabilities was first presented to provide both a general overview and a context for the analysis of the Texas population. The Texas population of individuals with disabilities was then detailed using 2023 five-year ACS microdata with a focus on the characteristics of civilian labor force participants with disabilities.

National data indicate that the numbers of individuals with disabilities have been increasing since 2013; however, the percentages of individuals with disabilities have consistently been between 12 percent approximately 13 percent of the total noninstitutionalized population. Women are more likely to have a disability than men, and the average age of the population of individuals with disabilities (56) is older than the average age of the population without disabilities (37). Individuals with disabilities most frequently reported having ambulatory difficulties. The unemployment rate for individuals with disabilities is higher than for individuals without disabilities and the average yearly income for individuals with disabilities is less than for individuals without disabilities at every educational attainment level.

In Texas, the average age of a labor force participant with a disability was 46 in 2023. Approximately 34 percent of Texans age 16 and older with disabilities (1,089,109 individuals) were labor force participants in 2023. Individuals with disabilities accounted for approximately seven percent of civilian labor force participants age 16 and older in Texas. The three industries that employed the largest numbers of labor force participants with disabilities in Texas were construction, food services and drinking places, and elementary and secondary schools. Labor force participants with disabilities who worked full time earned an average salary of \$63,740, whereas part-time workers earned \$20,595.

The demographic overview of individuals with disabilities presented in this report is meant to assist policy makers and program planners in the design and implementation of relevant programs and services. This study supports policy recommendations made by the Committee on People with Disabilities (2023) to the 88th Texas Legislature regarding individuals with disabilities in the labor force. In order to support full employment opportunities for individuals with disabilities, the labor force recommendations concern educating employers about legal requirements, supporting an inclusive business climate, promoting accessible workplace technology, enhancing existing state services, encouraging an integrated approach to service delivery, and responding quickly to emerging trends, including the aging of the workforce.

Individuals with disabilities can enhance workforce diversity and offer employers the skills, knowledge and experience that Texas businesses need to thrive. These individuals can strengthen the current and future Texas economy and are a valuable resource for Texas employers. The Texas workforce system must ensure that employers have access to every potential skilled worker.

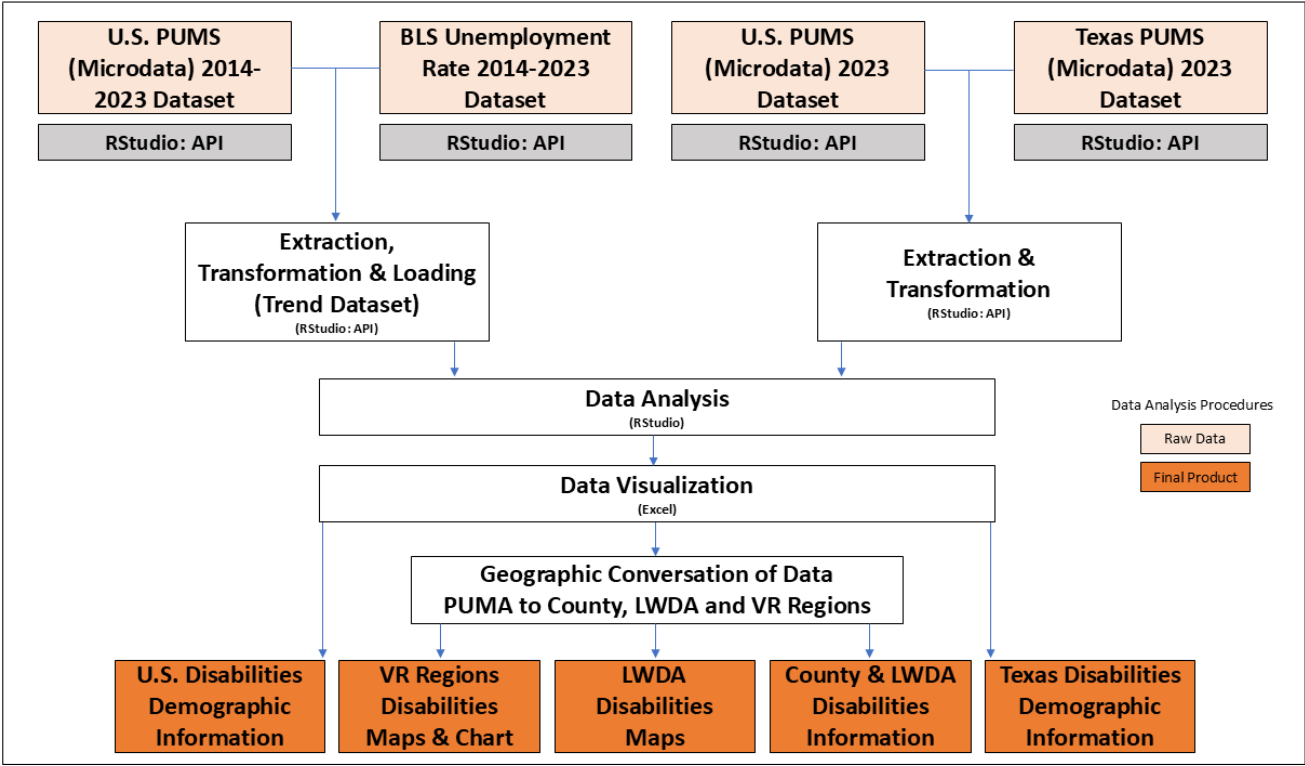

No Texan can be left behind. Private and public sector workplaces that support integrated employment opportunities as well as a greater use of assistive technologies in the workplace can provide individuals with disabilities the opportunity to gain and maintain employment.

Appendix A: Data Processing Framework

Appendix B: U.S. and Texas Disability Data for Comparison

National and state data displayed side-by-side in Table 23 and 24 in this appendix are for reader clarity only. The percentages may be used to compare the U.S. and Texas disability data. The analyses in this report do not include t-tests to determine if the differences are statistically significant.

Table 23: Individuals with Disabilities in U.S. and Texas

Individuals with Disabilities	United States		Texas	
	Number	Percent	Number	Percent
Male with disabilities	20,822,147	48.6%	1,731,677	49.2%
Female with disabilities	22,033,997	51.4%	1,787,863	50.8%
Total	42,856,144	100%	3,519,540	100%

Appendix C: Individuals with Disabilities in Texas by LWDA, 2023

Figure 13: Number and Percent of Individuals with Disabilities in Texas by LWDA, 2023

Appendix D: Individuals with Disabilities in Texas by VR Regions, 2023

Considering the responsibilities of providing individuals with disabilities with educational and career support by the Texas Workforce Commission Vocational Rehabilitation, this section provides thematic maps and labor force participation by VR regions.

Figure 14: Number and Percent of Individuals with Disabilities in Texas by VR Regions, 2023

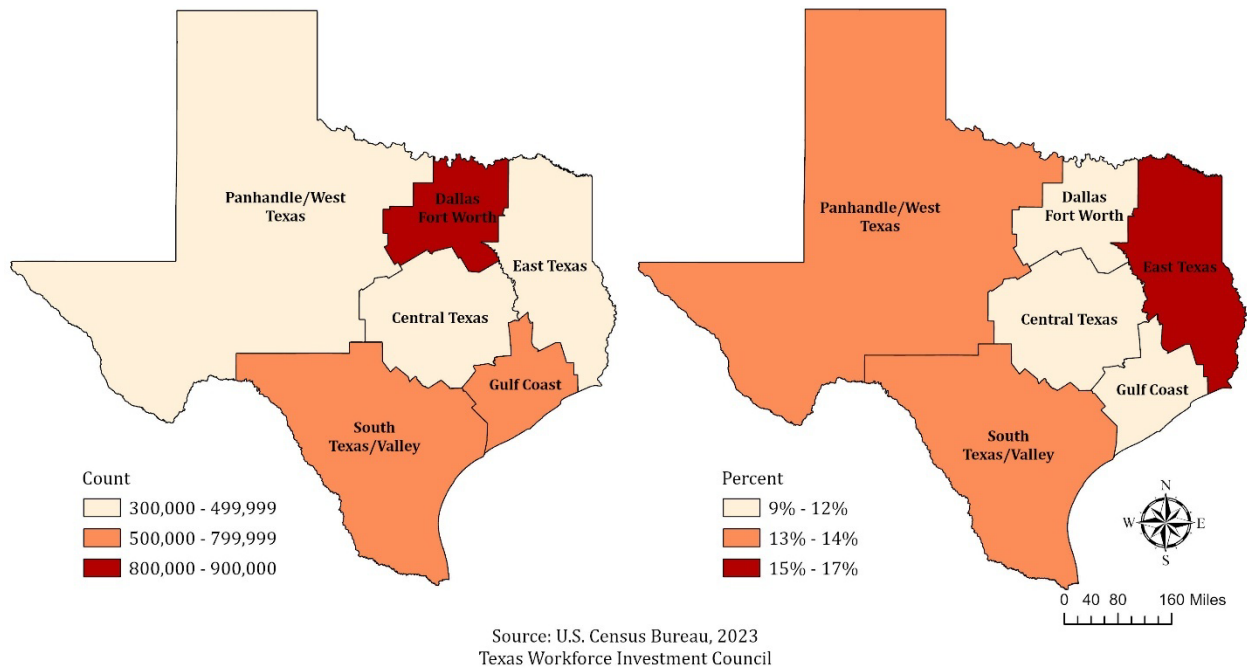

Figure 15: Number and Percent of Individuals with Disabilities Labor Force Participants in Texas by VR Regions, 2023

Appendix E: Number of Individuals with Disabilities in Texas by County in Each LWDA, 2023

This appendix illustrates the numbers of individuals with disabilities by each county in the local workforce development areas. The total population of the county is presented with the number of individuals with any disability. The numbers of individuals with self-care, hearing, vision, independent living, ambulatory, and cognitive difficulties are also provided. Since the reported disability categories are not mutually exclusive and the same individual may report multiple disabilities, adding the different types of disabilities does not equal the number of individuals with any disability. The tables are based on disability estimates from the ACS. For more information on how county estimates were calculated, see the explanation in the Data Sources section of this report.

Appendix F: Labor Force Participants with Disabilities in Texas by County in Each LWDA, 2023

This appendix illustrates the numbers of labor force participants with disabilities by each county in the local workforce development areas. For more information on how county estimates were calculated, see the explanation in the Data Sources section of this report. The estimates indicate civilian, noninstitutionalized labor force participants 16 and older.
