## Introduction

Thousands of service members separate from the military every year and join the population of civilian veterans. According to the U.S. Department of Defense 204,556 individuals separated from the military in fiscal year (FY) 2014, including an estimated 22,929 residents of Texas. In addition, ACS data revealed that approximately 76 percent of post-9/11 veterans (Gulf War Era II in this report) were under age 45, while in comparison, about 79 percent of all other veterans were age 55 and over. Since service members generally must serve at least 20 years to qualify for military retirement benefits, a large percentage of recent service members separating from duty have not served long enough to qualify and will have to seek civilian employment. Some of the individuals who separated in FY 2014 will receive sufficient benefits and will not enter the civilian labor force.

Although veterans are a heterogeneous group and individual characteristics vary within the veteran population, many veterans have received extensive training in the military and possess valuable technical skills, leadership abilities, and the numerous soft skills (such as time management, a team orientation, a strong work ethic, self-confidence, and bearing) that are in high demand by employers. These attributes make the veteran population a valuable resource for Texas employers and the Texas economy. The Texas workforce system must ensure that veterans are prepared for employment following their military service and that employers have access to every available skilled worker.

### The Texas Workforce Investment Council

The Texas Workforce Investment Council (Council) was created in 1993 by the 73rd Texas Legislature. As an advisory body to the Governor and the Legislature, the Council assists with strategic planning for and evaluation of Texas' workforce system. The Council promotes the development of a well-educated, highly skilled workforce for Texas and advocates for a workforce system that provides quality workforce education and training opportunities. The 19-member Council includes representatives from business, labor, education, community-based organizations, and the Council's five member state agencies.

#### *Statutory Directive*

Under Title 10 Texas Government Code Section 2308.101, the Council is responsible for promoting the development of a well-educated, highly skilled workforce and advocating the development of an integrated workforce system to provide quality services addressing the needs of business and workers in Texas.

#### *The State Strategic Plan*

The development of an integrated strategic plan for the workforce system is one of the Council's primary responsibilities. To sustain and increase economic growth, a well-trained labor supply must be available for employers seeking to establish, conduct, or expand business operations in Texas. The mission of the Texas workforce system strategic plan (FY 2016–FY 2023) is to position Texas as a global economic leader by growing and sustaining a competitive workforce. All Texans are part of the critical pool of potential employees, including veterans.

## Scope of Report

Following consultations with the Texas Veterans Commission, the Council prepared this report to detail the demographic characteristics of the veteran population in Texas. This research can be utilized as a primer to understand the significant workforce issues related to veterans and as a general reference for data about this specific segment of the population. In the following section, data issues and limitations are discussed and important concepts are defined. The third section includes national data to provide a general overview of the veteran population in the U.S. and to discuss recent national labor force trends for veterans. The fourth section describes the veteran population in Texas with a focus on disabilities and the characteristics of veteran labor force participants. Finally, major findings are summarized and concluding comments are offered.

## **Data Limitations, Issues, and Concepts**

This study analyzes multiple aspects of the veteran population at both the national and state levels using several data sources. As with all research, the limitations associated with the data sources determine the specific types of analyses that can be conducted. Additionally, this study references and utilizes several technical concepts with specific definitions. This section details the data sources, data issues, and the key concepts related to this research.

### **Data Sources**

The three main data sources used for this research are the 2014 American Community Survey (ACS), the Department of Veterans Affairs VetPop2014 model, and labor force data from the Bureau of Labor Statistics (BLS). The ACS is an ongoing, yearly survey that samples a small percentage of the population. The sample respondents are weighted to approximate the demographic characteristics of the entire population. ACS data are available as summary tables (also referred to as pretabulated data) and Public Use Microdata Sample files. The microdata files utilize a smaller sample than the summary tables, but can be used to calculate custom estimates. In this report, summary table data are used for analyses at the national level and microdata are used for analyses at the state level. Minor differences exist between estimates derived from the summary tables and microdata because of the previously discussed sampling differences, and will be noted as necessary.

VetPop2014 is a model that uses data from the Census, ACS, Defense Manpower Data Center, and the Department of Defense to produce official estimates and projections of the veteran population. For 2013 to 2043, VetPop2014 produces the number of veterans at the state and national levels by age, gender, race, period of service, branch of service, and rank. Estimates and projections are produced at the county level by age and gender.

BLS derives annual and monthly labor force statistics from the Current Population Survey (CPS). The CPS is an ongoing monthly survey administered to a sample of households. CPS data are utilized for various economic statistics such as the national unemployment rate and measures related to employment and income.

### **Data Issues and Limitations**

The specific analyses that can be conducted are limited to the variables that are included in the datasets. Analyses are also limited because estimates are not always available for certain geographies. For example, even though the ACS microdata provide rich demographic data with variables assessing various individual characteristics, data are not available at the county level. Therefore, analyses cannot be conducted for counties. Alternatively, the number of veterans in each county is available through VetPop2014, but no other additional demographic information is provided such as age, sex, or education level.

Unlike the decennial census, which is administered to the total population in order to determine accurate counts, the ACS and CPS are based on samples and produce estimates. VetPop2014 is a mathematical model that utilizes data inputs to produce estimates. Since the three data sources utilize different samples and methodologies, the estimates from each source will be similar but will not exactly match. For example, the number of U.S. veterans in 2014 is estimated to be 19,259,717 by ACS summary tables; 21,791,593 by VetPop2014<sup>1</sup>; and 21,229,000 by BLS using the CPS. When possible, the ACS estimates will be referenced since a majority of the analyses in this report are based on that dataset.

## Concepts

Several important concepts are utilized throughout this report and serve as the basis for many of the analyses. The concepts are conventional and frequently used by BLS and the Census Bureau. For the sake of clarity and so that the analyses can be replicated, the important concepts referenced in this report are discussed and defined in this section.

In this report, the definition of “veteran” is based on the concept of a civilian veteran utilized by the Census Bureau. A veteran is defined as an individual who once served on active duty in the U.S. armed forces or who was in the Reserves or National Guard and was activated into federal status (for example, during the Persian Gulf War). Individuals currently on active duty are not considered veterans and are not included in these analyses.

Some analyses in this report reference the civilian noninstitutional population. The civilian noninstitutional population is composed of all individuals 16 years of age and older in the U.S. who are not on active duty in the military and who are not inmates of institutions such as prisons, mental health facilities, or homes for the aged. Several analyses present veterans as a percentage of the population. Because of census data differences and limitations, veterans are presented as a percentage of the 16 and older civilian population in 1980 and 1990 and as a percentage of the 18 and older civilian population in 2000 and beyond. For the purpose of approximating the percentage of the population who are veterans, the results are comparable.

To remain consistent with accepted terminology and measures related to the labor force (such as the unemployment rate), several analyses in this report depend upon or reference the civilian labor force. The civilian labor force comprises all noninstitutionalized individuals 16 years old and older who are either employed or unemployed and are not members of the armed forces, students in school, homemakers, retirees, people who cannot work because of health problems, or discouraged job seekers (individuals who want jobs and looked for work in the past year, but abandoned their search believing that no suitable jobs are available). In this report, the individuals who constitute the civilian labor force are also referred to as labor force participants. Several analyses will also reference the 18 and older civilian labor force.

---

<sup>1</sup> The VetPop2014 number referenced excludes veterans residing in U.S. territories and foreign countries, equaling a difference of approximately 207,000.

# Veterans in the U.S.

According to ACS summary table estimates, 7.9 percent of the U.S. civilian population 18 years and older were veterans in 2014. Veterans also accounted for nine percent of the 18 and older civilian labor force in 2014. In this section, a general demographic description of the U.S. veteran population will be provided as a context for a discussion of the veteran population in Texas in the following section.

## U.S. Veteran Population Trends

The veteran population in the U.S. has been declining due to the mortality of the older veterans who served in World War I, World War II, and Korea. Figure 1 illustrates the number of veterans in the U.S. and the percentage of veterans in the population from 1980 to 2014. In 1980, approximately 16 percent of the 16 and older U.S. population (27,406,299 individuals) were veterans. By 2014, 7.9 percent of the 18 and older population (19,259,717) were veterans. The Gulf War Era II veteran population is projected to increase 46 percent between 2014 and 2019 (National Center for Veterans Analysis and Statistics, 2014).

**Figure 1: Number of U.S. Veterans and Percentage of Population, 1980-2014**

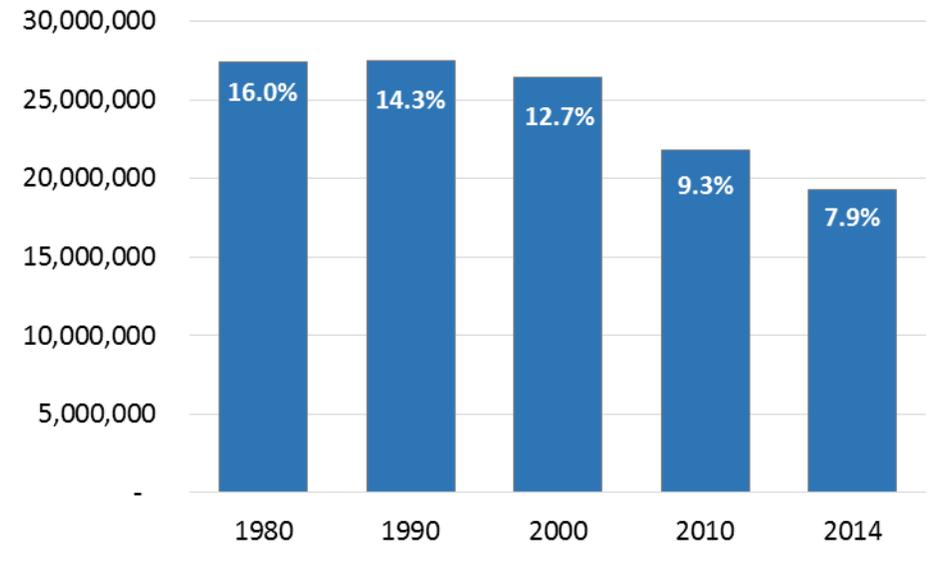

Figure note: 1980 through 2000 data are from Census, 2010 and 2014 data are from ACS summary tables as Census data is not available. 1980 and 1990 percentages represent the portion of the 16 and older civilian population that are veterans. 2000, 2010, and 2014 percentages represent the portion of the 18 and older civilian population that are veterans.

## Regional Patterns

The veteran population is not evenly distributed across the nation. ACS summary data indicate that the South had the largest number of veterans in 2014. The region with the second largest number of veterans was the West, followed by the Midwest. The Northeast had the smallest number of veterans.

The regional distribution of veterans can be examined in even more detail by reviewing the veteran population of each state.

Appendix A contains a thematic map that illustrates the veteran population in each state. Table 1 utilizes the same data presented by the map in Appendix A to illustrate the ten states with the largest veteran populations in 2014. Generally, states with the largest populations also had the largest numbers of veterans. States with the smallest populations had the smallest numbers of veterans. Texas had the second largest veteran population of all the states. The states with the fewest numbers of veterans were Vermont, Wyoming, and North Dakota.

**Table 1: The Ten States with the Largest Veteran Populations, 2014**

State	Veterans	Civilian Population Age 18 and Older	Percentage of Veterans in 18 and Older Population
California	1,693,602	29,521,047	5.7%
Texas	1,496,724	19,753,531	7.6%
Florida	1,461,722	15,785,763	9.3%
Pennsylvania	821,624	10,083,267	8.1%
New York	773,063	15,498,859	5.0%
Ohio	759,737	8,950,281	8.5%
Virginia	690,427	6,352,059	10.9%
North Carolina	673,384	7,573,326	8.9%
Georgia	651,283	7,558,160	8.6%
Illinois	639,445	9,878,277	6.5%

Table note: 2014 ACS summary table data.

The veteran population can also be expressed as a percentage of the total population of everyone 18 and older to provide an idea of the concentration of veterans in each state. Alaska had the largest percentage of veterans (13.1 percent) in the 18 and older population, followed by Virginia, Maine, Montana, and Washington (all at approximately 10 percent). New York and New Jersey (approximately five percent), and California (5.7 percent) had the smallest percentage of veterans in the 18 and older population.

### Demographic Characteristics of the U.S. Veteran Population

The veteran population of the U.S. differs from the nonveteran population in several demographic characteristics. A greater percentage of veterans were non-Hispanic whites (78.9 percent) compared to nonveterans (63.8 percent). Gender differences between the veteran and nonveteran populations are also pronounced. Approximately 91.8 percent of veterans were men in 2014 compared to 44.8 percent of nonveterans.

The veteran and nonveteran populations also differ regarding educational attainment. Table 2 illustrates that in 2014 a greater percentage of nonveterans 25 and older had less than a high school diploma or equivalency compared to veterans. Approximately 37 percent of veterans 25 and older had some college or an associate's degree compared to 28 percent of nonveterans.

**Table 2: Percentages of U.S. Veterans and Nonveterans 25 and Older by Education Level, 2014**

Education Level	Veterans	Nonveterans
Less than high school graduate	7.4%	14.4%
High school graduate (includes equivalency)	29.3%	27.9%
Some college or associate's degree	36.6%	28.2%
Bachelor's degree or higher	26.6%	29.5%
Civilian population 25 years and older	20,389,113	188,034,465

Table note: 2014 ACS summary table data.

Additionally, the veteran population tends to be older than the nonveteran population. Table 3 illustrates that approximately 67 percent of veterans were 55 and older compared to approximately 31 percent of nonveterans. Only 8.4 percent of veterans were between the ages of 18 and 34 in 2014.

**Table 3: Percentages of U.S. Veterans and Nonveterans by Age Categories, 2014**

Age Categories	Veterans	Nonveterans
18 to 34 years	8.4%	32.5%
35 to 54 years	24.7%	36.4%
55 to 64 years	21.9%	15.6%
65 to 74 years	22.4%	8.9%
75 years and over	22.7%	6.6%
Total	20,700,711	218,604,506

Table note: 2014 ACS summary table data.

The age difference between veterans and nonveterans can partially be explained by the time period in which a majority of veterans served in the military. In 2014, 54 percent of the veteran population served during the Vietnam, Korean or World War II eras. Approximately 17 percent served during the Gulf War Era I (August 1990 through August 2001) and 12.8 percent of veterans served during the Gulf War Era II (September 2001 to present). Figure 2, on the following page, illustrates the percentages of veterans that served in each era.

**Figure 2: U.S. Veterans' Period of Service, 2014**

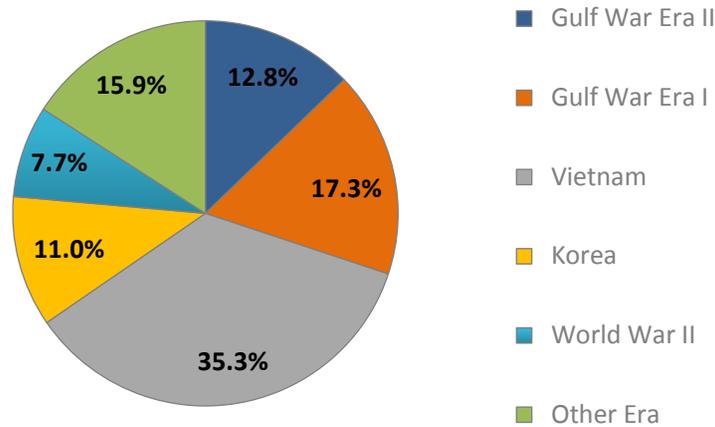

Figure note: 2014 ACS summary table data. Period of service is determined by the most recent era served. Gulf War Era I is from August 1990 to August 2001. Gulf War Era II is from September 2001 to the present.

## U.S. Veterans and Disabilities

The issue of disabilities is particularly relevant for the veteran population. On average, the veteran population is older than the nonveteran population and the likelihood of developing a disability increases with age (Texas Workforce Investment Council, 2014). Additionally, because of the rigors associated with military service, numerous veterans have service connected disabilities. Veterans with a service connected injury or illness incurred or aggravated during active military service are assessed and assigned a disability rating. Depending on the severity of the disability rating, veterans may receive disability benefits in the form of monthly compensation.

Of the 19,259,717 veterans in the U.S., 19.5 percent (3,756,131 individuals) have a service connected disability rating. Table 4 illustrates the percentages of veterans within the different ranges of disability ratings. Disability compensation is a monetary benefit paid to veterans who are determined by Veterans Affairs to be disabled by an injury or illness that was incurred or aggravated during active military service. These disabilities are considered to be service connected. To be eligible for compensation, the veteran must have been separated or discharged under conditions other than dishonorable. Approximately six percent of veterans have a zero percent disability rating. A zero percent disability rating indicates a service related injury that does not impair the veteran, such as a superficial scar. The majority of veterans with a service connected rating (30.5 percent) have a disability rating of 10 to 20 percent. Approximately 28 percent of veterans with a rating have a disability rating of 70 or higher.

**Table 4: Percentages of U.S. Veterans with Service Connected Disability Ratings, 2014**

Service Connected Disability Rating	Number	Percent
0 percent	207,212	5.5%
10 to 20 percent	1,145,861	30.5%
30 to 40 percent	643,759	17.1%
50 to 60 percent	471,950	12.6%
70 to 100 percent	1,062,730	28.3%
Not reported	224,619	6.0%
<b>Total</b>	<b>3,756,131</b>	

Table note: 2014 ACS summary table data.

Twenty-nine percent of Gulf War Era II veterans had a service connected disability. Approximately 17 percent (584,000) of Gulf War Era I veterans reported a service connected disability (Bureau of Labor Statistics, 2014). Disabilities will be discussed in more detail in the next section with a focus on Texas veterans.

### Recent National Labor Force Trends for Veterans

Figure 3 illustrates that the unemployment rate for veterans was lower than for nonveterans from 2008 to 2014. However, unemployment rates are generally lower for older individuals, and the veteran population is older than the nonveteran population, on average. BLS data indicate that in 2014, the unadjusted unemployment rate was 5.3 percent for veterans and six percent for nonveterans.

**Figure 3: National Unemployment Rates for U.S. Veterans and Nonveterans, 2008-2014**

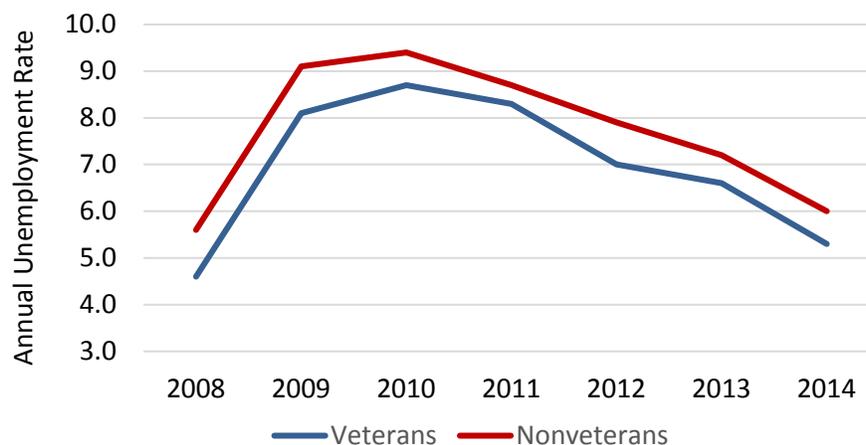

Figure note: Annual unemployment rates are not seasonally adjusted. The rates are for veterans and nonveterans 18 years and older. Data are from BLS.

Because unemployment differs by age, a closer examination of unemployment rates within the veteran population by age group is warranted. In 2014, the annual average unemployment rate of nonveterans

between the ages of 18 to 24 was 12.5 percent. For veterans between the ages of 18 to 24, the annual unemployment rate was 16.2 percent. Between the ages of 25 to 34, the annual unemployment rate was 6.5 percent for nonveterans and 7.7 percent for veterans. For the other age categories, the unemployment rates were similar, ranging between four and five percent.

Differences in unemployment rates are also observed when veterans’ eras of service are considered. Figure 4 compares the unemployment rates of nonveterans with veterans who served during Gulf War Era II (September 2001 to present) and Gulf War Era I (August 1990 through August 2001). From 2008 to 2014, the unemployment rates of Gulf War Era II veterans have been greater than for nonveterans. This difference between the rates of Gulf War Era II veterans and nonveterans increased from 2009 to 2011. In 2011, the annual unadjusted unemployment rate for Gulf War Era II veterans was 12.1 percent. By 2014, Gulf War Era II veteran unemployment was 7.2 percent and nonveteran unemployment was six percent. The unemployment rates of Gulf War Era I veterans have paralleled the rates of nonveterans, but have been lower. In 2014, Gulf War Era I veteran unemployment was 4.2 percent.

**Figure 4: National Unemployment Rates for Gulf War Era I Veterans, Gulf War Era II Veterans, and Nonveterans, 2008-2014**

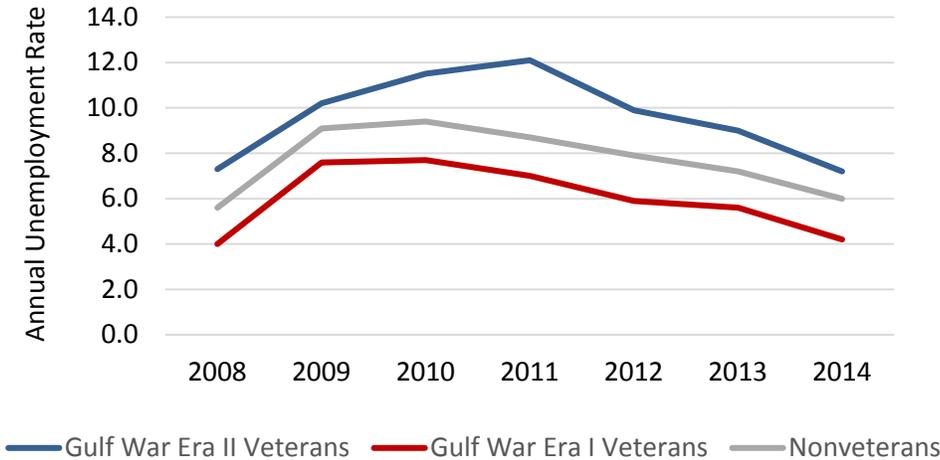

Figure note: Annual unemployment rates are not seasonally adjusted. The rates are for veterans and nonveterans 18 years and older. Gulf War Era I is from August 1990 to August 2001. Gulf War Era II is from September 2001 to the present. Data are from BLS.

Differences in unemployment also exist between genders. On the following page, Figure 5 illustrates that between 2008 and 2014, nonveteran men had higher unemployment rates than nonveteran women. Conversely, Gulf War Era I and Gulf War Era II female veteran unemployment rates were higher than Gulf War Era I and Gulf War Era II male veteran unemployment rates in 2014.

**Figure 5: National Unemployment Rates for Men and Women: Nonveterans, Gulf War Era II Veterans, and Gulf War Era I Veterans, 2008-2014**

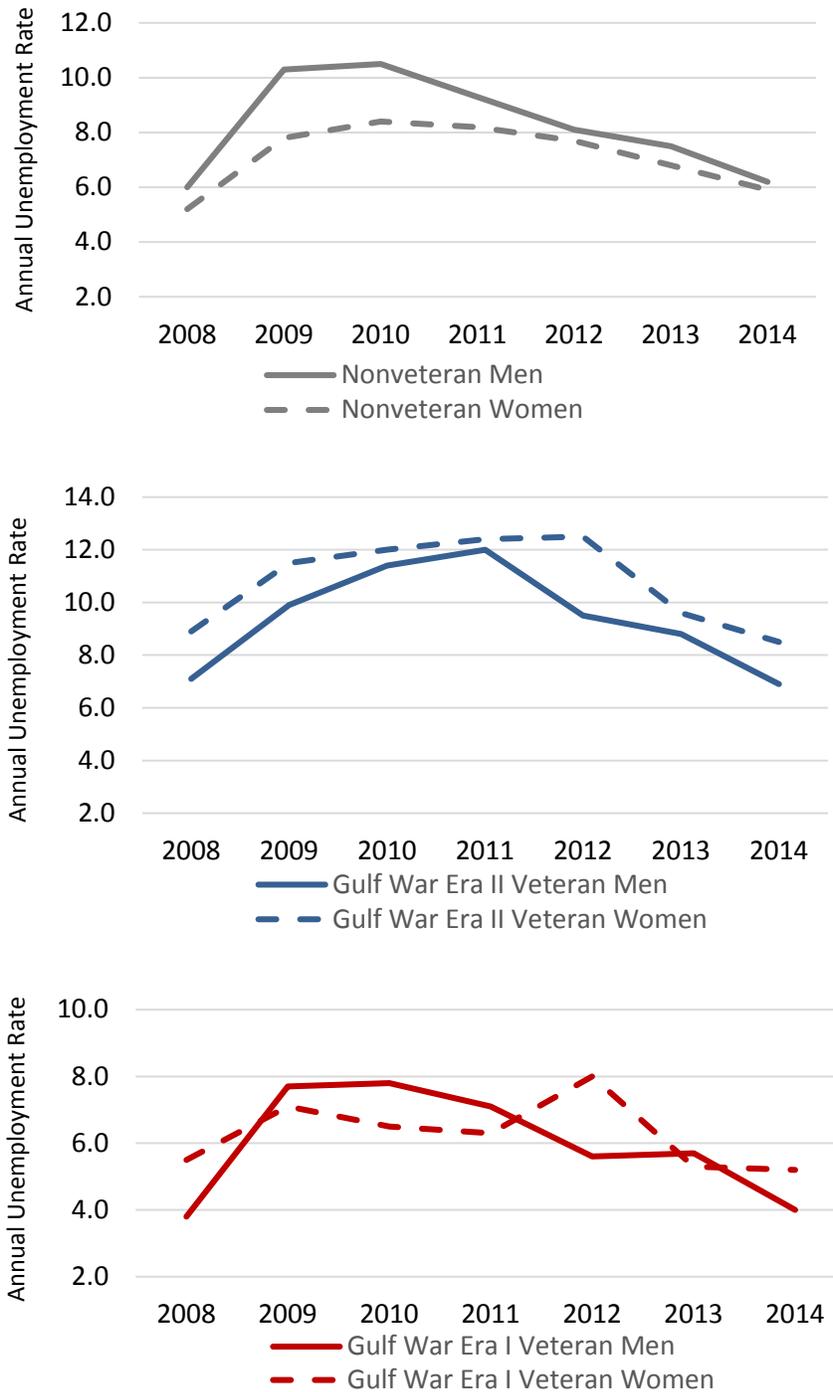

Figure note: Annual unemployment rates are not seasonally adjusted. The rates are for veterans 18 years and older. Gulf War Era I is from August 1990 to August 2001. Gulf War Era II is from September 2001 to the present. Data are from BLS.

This page intentionally left blank.

## Veterans in Texas

The ACS microdata estimates that 8.2 percent of the civilian population 18 years and older (1,564,501 individuals)<sup>1</sup> in Texas were veterans in 2014. According to the Department of Defense Transition Assistance Program, an estimated 22,000 Texas residents separated from the military and approximately half of these separating veterans were 24 years old or younger in FY 2015. In this section, a description of the veteran population in Texas will be provided with a focus on regional distribution, demographic characteristics, prevalence of disabilities, and labor force characteristics.

### Texas Veteran Population Trends and Regional Patterns

Figure 6 illustrates the number of veterans in Texas and the percentage of veterans in the population from 1980 to 2014. The number of Texas veterans increased from 1980 to 2000 and then declined in 2010 and again in 2014. In 1980, 16.4 percent of the 16 and older population in Texas (1,715,857 individuals) were veterans. The number of veterans in Texas increased from 1990 to 2000. However, because the population of Texas grew rapidly<sup>2</sup>, veterans have accounted for a smaller percentage of the population. By the 2010-2014 timeframe, there was a decline in the 18 and older veteran population in Texas.

**Figure 6: Number of Texas Veterans and Percentage of Population, 1980-2014**

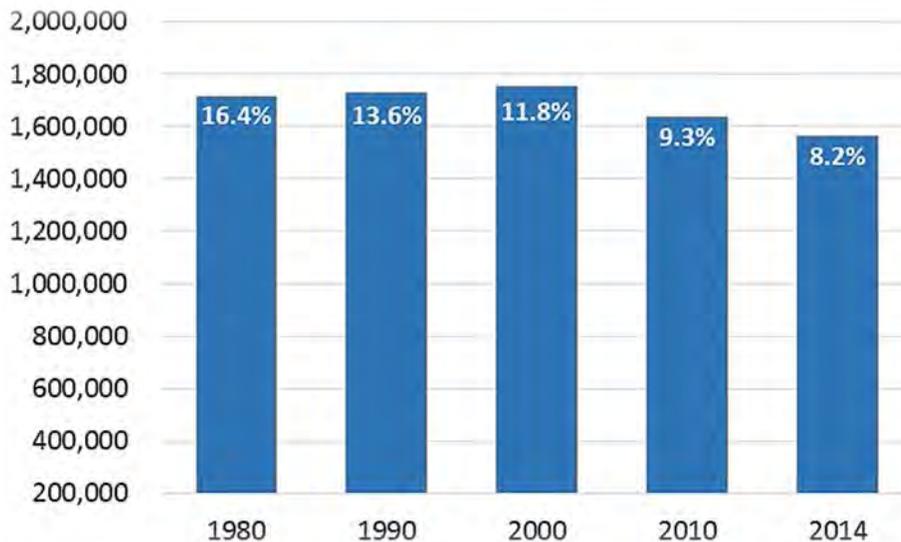

Figure note: 1980 through 2000 data are from Census and 2010 data are from ACS summary data. 1980 and 1990 percentages represent the portion of the 16 and older civilian population that are veterans. 2000 and 2010 percentages represent the portion of the 18 and older civilian population that are veterans.

<sup>2</sup> Estimates derived from ACS microdata differ slightly from the estimates presented earlier based on ACS summary tables. Most of the analyses in this section on veterans in Texas are based on ACS microdata.

<sup>3</sup> In 1990, the size of the 16 and older civilian population was 12.6 million, in 2000 the size of the 18 and older civilian population was approximately 14.9 million, and in 2014 it grew to 19 million.

The veteran population of Texas is not evenly distributed across the state. Appendix B contains a thematic map that utilizes VetPop2014 estimates to illustrate the veteran population in each county. Similar to the findings at the national level, counties with large populations generally have the largest numbers of veterans. Harris County, the most populous county in the state, is home to 187,235 veterans. The counties with the largest numbers of veterans in 2014 were Harris, Bexar, Tarrant, Dallas, Collin, Travis, Bell, El Paso, Denton, and Montgomery. Over 40 percent of the state’s veteran population resided in these 10 counties. Appendix C contains the numbers of veterans in each county of the local workforce development areas.

### Demographic Characteristics of the Texas Veteran Population

The Texas veteran population differs from the nonveteran population of the state in several demographic characteristics. As illustrated in Table 5, a greater percentage of Texas veterans were non-Hispanic whites (66.9 percent) compared to nonveterans (45.7 percent). A greater percentage of Texas veterans were also African American (13 percent) compared to nonveterans (11.8 percent). Approximately 17 percent of the Texas veteran population was Hispanic in 2014.

**Table 5: Race and Ethnicity of Texas Veterans and Nonveterans, 2014**

Race / Ethnicity	Veterans		Nonveterans (18+)	
	Number	Percent	Number	Percent
White	1,001,308	66.9%	8,343,361	45.7%
Hispanic	258,933	17.3%	6,645,478	36.4%
African American	194,574	13.0%	2,154,303	11.8%
Other	28,438	1.9%	237,338	1.3%
Asian	13,471	0.9%	876,327	4.8%
Total	1,496,724		18,256,807	

Table note: 2014 ACS microdata.

Gender differences between the veteran and nonveteran populations are also pronounced. In 2014, 90 percent of Texas veterans were men compared to 46 percent of nonveterans. Ten percent of the total Texas veteran population is female. However, the percentages of female veterans differ when period of service is considered. Table 6 illustrates that the female veteran population has grown considerably over time. Females comprise a greater percentage of the Texas veteran population for later periods of service, such as Gulf War Era II. Only 3.5 percent of World War II era veterans and 3.7 percent of Vietnam era veterans are female. However, 16.7 percent of Gulf War Era I veterans and 19.6 percent of Gulf War Era II veterans are female in Texas.

**Table 6: Percentage of Male and Female Texas Veterans by Period of Service, 2014**

Period of Service	Male		Female		Total
	Number	Percent	Number	Percent	Number
Gulf War Era II	245,487	80.4%	59,845	19.6%	305,332
Gulf War Era I	292,991	83.3%	58,739	16.7%	351,730
Vietnam	501,588	96.3%	19,272	3.7%	520,860
Korea	115,285	97.5%	2,956	2.5%	118,241
World War II	62,107	96.5%	2,253	3.5%	64,359
Other	125,442	92.1%	10,760	7.9%	136,202
Total	1,342,900		153,824		1,496,724

Table note: 2014 ACS microdata.

The veteran and nonveteran populations in Texas also differ according to education level. Table 7 illustrates that a greater percentage of nonveterans 25 and older had less than a high school diploma compared to veterans in 2014. Approximately 41 percent of veterans 25 and older had some college or an associate's degree compared to 28 percent of nonveterans in Texas. A greater percentage of veterans also had a bachelor's degree or higher compared to nonveterans in Texas.

**Table 7: Percentages of Texas Veterans and Nonveterans 25 and Older by Education Level, 2014**

Education Level	Veterans	Nonveterans
Less than high school graduate	6.0%	19.0%
High School graduate (includes equivalency)	23.6%	25.3%
Some college or associate's degree	41.3%	28.0%
Bachelor's degree or higher	29.1%	27.7%
Civilian population age 25 years and over	1,465,557	15,566,932

Table note: 2014 ACS microdata.

While the Texas veteran population is younger than the U.S. veteran population, it is older than the nonveteran population in the state. The median age of a veteran in Texas is 63, whereas the median age of a nonveteran is 42. Table 8 illustrates that approximately 61 percent of veterans were 55 and older compared to approximately 28 percent of nonveterans. Approximately 12 percent of Texas veterans were between the ages of 18 and 34 compared to approximately 35 percent of nonveterans in 2014.

**Table 8: Percentages of Texas Veterans and Nonveterans by Age Categories, 2014**

Age Categories	Veterans	Nonveterans
18 to 34 years	12.2%	35.1%
35 to 54 years	27.0%	36.7%
55 to 64 years	19.6%	14.6%
65 to 74 years	22.8%	8.2%
75 years and over	18.3%	5.4%
Total	1,496,724	18,256,807

Table note: 2014 ACS microdata.

An analysis of the time period in which a majority of Texas veterans served in the military partially explains the age difference between veterans and nonveterans. Figure 7 illustrates the percentages of veterans that served in each era. The greater number of Texas veterans from earlier periods of service inflates the average age of the veteran population. In 2014, approximately 47 percent of the veterans in Texas served during the Vietnam, Korean, or World War II eras. Approximately 24 percent of Texas veterans served during the Gulf War Era I (August 1990 through August 2001) and 20 percent of Texas veterans served during the Gulf War Era II (September 2001 to present).

**Figure 7: Texas Veterans' Period of Service, 2014**

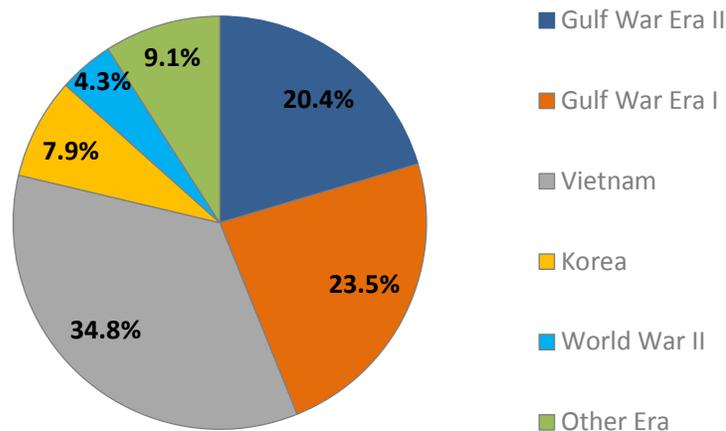

Figure note: 2014 ACS microdata. Period of service is determined by the most recent era served.

Age differences can also be observed within the veteran population when each period of service is analyzed separately (Table 9). The median ages of Gulf War Era II and Gulf War Era I veterans in Texas are 29 and 44, respectively. The median age of a Vietnam veteran is 65. Texas veterans who served during World War II have a median age of 87, the oldest median age of all service periods.

**Table 9: Median Age of Texas Veterans by Period of Service, 2014**

Period of Service	Median Age	Total in Each Service Period
Gulf War Era II	29	305,332
Gulf War Era I	44	351,730
Vietnam	65	520,860
Korea	80	118,241
World War II	87	64,359
Other	57	136,202
Total	63	1,496,724

Table note: 2014 ACS microdata.

### Texas Veterans and Disabilities

The prevalence of disabilities within the veteran population is particularly relevant since the veteran population is older than the nonveteran population on average and the likelihood of developing a disability increases with age. Approximately 28 percent of Texas veterans (426,566 individuals) report having a disability compared to 13 percent of the 18 and older nonveteran population (2,446,412 individuals). Table 10 details the specific types of disabilities reported by the veteran and nonveteran populations in Texas. The reported disability categories are not mutually exclusive and one individual may be counted in multiple disability categories. Additionally, the disability may not necessarily be the consequence of military service. Ambulatory difficulty was the disability most frequently reported by 16.2 percent of the veteran population. Hearing and cognitive difficulties were the second and third most frequently reported disabilities. Independent living, self-care, and vision difficulties were the least frequently reported. These data underscore the need for any services that address the needs of veterans to include support for disabilities.

**Table 10: Percent of Veterans and Nonveterans (18 and Older) Reporting a Disability in Texas, 2014**

Reported Disability	Veterans		Nonveterans (18+)	
	Number	Percent	Number	Percent
Ambulatory difficulty	242,052	16.2%	1,699,594	9.3%
Hearing difficulty	219,427	14.7%	899,741	4.9%
Cognitive difficulty	134,534	9.0%	1,043,016	5.7%
Independent living difficulty	133,718	8.9%	1,128,328	6.2%
Self-care difficulty	85,182	5.7%	644,640	3.5%
Vision difficulty	71,829	4.8%	652,640	3.6%
Total Population	1,496,724		18,256,807	

Table note: 2014 ACS microdata. Reported disability categories are not mutually exclusive and one individual can report having several disabilities.

Considering that disabilities are associated with increased age and that the median age of veterans differs by period of service, the prevalence of disabilities within the veteran population may vary according to period of service. Table 11 illustrates the reported disabilities of veterans in each period of service. Generally, the percentages of reported disabilities are greater for the earlier periods of service. Almost 44 percent of World War II veterans report ambulatory difficulties and approximately 38 percent report hearing difficulty. In comparison, 3.5 percent of Gulf War Era II veterans report ambulatory difficulties and 4.3 percent report hearing difficulty. The biggest exception to this general trend is cognitive difficulty. Cognitive difficulties are reported by a larger percentage of Gulf War Era II veterans than Gulf War Era I veterans even though the median age of the Gulf War Era I group is 10 years older. The difference in reported cognitive difficulties between these two groups is statistically significant, indicating that the difference cannot be explained by chance alone.

**Table 11: Percent of Veterans Reporting a Disability in Texas by Period of Service, 2014**

Reported Disability	Period of Service					
	Gulf War Era II	Gulf War Era I	Vietnam	Korea	World War II	Other
Ambulatory difficulty	3.5%	4.5%	17.3%	25.9%	43.5%	33.2%
Hearing difficulty	4.3%	2.5%	15.8%	27.9%	37.7%	26.9%
Cognitive difficulty	5.4%	3.9%	7.9%	12.0%	19.7%	16.6%
Independent living difficulty	2.6%	2.1%	7.9%	17.3%	33.6%	16.8%
Self-care difficulty	0.9%	1.0%	5.5%	11.2%	22.1%	11.3%
Vision difficulty	1.0%	1.1%	4.6%	7.8%	14.1%	11.7%
Total Veterans	305,332	351,730	520,860	118,241	64,359	136,202

Table note: 2014 ACS microdata. Reported disability categories are not mutually exclusive and one individual can report having several disabilities.

The greater prevalence of disabilities within the Texas veteran population is an important demographic characteristic of the group. However, the previously presented disability data cannot be directly attributed to military service since the survey question asked respondents to report their current disabilities. A better indicator of disabilities related to military service is the service connected disability rating reported in the ACS microdata. Approximately 23 percent of Texas veterans (350,021 individuals) have a service connected disability rating. Table 12 illustrates the percentage of Texas veterans within the different ranges of disability ratings. Approximately four percent of Texas veterans have a zero percent disability rating. Nearly 28 percent of veterans with a service connected rating have a disability rating of 10 or 20 percent. Approximately 33 percent of Texas veterans with a service connected rating have a disability rating of 70 percent or higher.

**Table 12: Percentages of Texas Veterans with Service Connected Disability Ratings, 2014**

Service Connected Disability Rating	Number	Percent
0 percent	15,187	4.3%
10 or 20 percent	96,324	27.5%
30 or 40 percent	57,207	16.3%
50 or 60 percent	49,029	14.0%
70 to 100 percent	114,567	32.7%
Not reported	17,707	5.1%
Total	350,021	

Table note: 2014 ACS microdata.

Service connected disability ratings can also be analyzed by period of service. Table 13 illustrates the percentage of Texas veterans within the different ranges of disability ratings for each period of service. The period of service with the largest number of Texas veterans with any service connected disability rating is the Vietnam era. This period also had the greatest percentage of veterans with service connected disability ratings of 70 percent or higher. Over 30 percent of Gulf War II era veterans had service connected disability ratings of 70 percent or higher in 2014.

**Table 13: Percentages of Texas Veterans with Service Connected Disability Ratings by Period of Service, 2014**

Service Connected Disability Rating	Period of Service					
	Gulf War Era II	Gulf War Era I	Vietnam	Korea	World War II	Other
0 percent	5.2%	6.6%	3.7%	3.3%	10.3%	8.7%
10 to 20 percent	23.7%	33.1%	29.3%	33.8%	29.0%	35.3%
30 to 40 percent	18.9%	19.6%	14.1%	13.3%	11.5%	14.9%
50 to 60 percent	15.3%	11.5%	13.8%	19.0%	14.9%	11.5%
70 to 100 percent	30.2%	26.5%	35.6%	23.2%	22.6%	22.0%
Not reported	6.7%	2.8%	3.6%	7.4%	11.6%	7.5%
Total	55,301	53,271	117,840	10,479	6,945	32,323

Table note: 2014 ACS microdata.

### Characteristics of the Veteran Labor Force in Texas

The demographic analyses presented in this subsection focus on Texas veteran labor force participants. Approximately 54 percent of Texas veterans (813,594 individuals) were labor force participants in 2014. These veterans accounted for 6.5 percent of the state’s total workforce. Since unemployment rates are generally lower for older individuals, the unemployment rate for veterans is lower than the state average

since the Texas veteran population is older than the nonveteran population in the state. In 2014, the annual average unemployment rate was 5.9 percent for the Texas general working population and 5.5 percent for Texas veterans. However, differences in unemployment do exist within the veteran population. Gulf War Era II Texas veterans had a 5.2 percent unemployment rate in 2014, compared to 7.2 percent for U.S. veterans from the same service period (U.S. Congress Joint Economic Committee, March 2015).

In 2014, the median age of a veteran labor force participant in Texas was 45. As illustrated in Table 14, approximately 43 percent of veteran labor force participants were between the ages of 35 to 54 and approximately 23 percent were between the ages of 55 to 64. Approximately 16 percent of the veteran labor force participants in Texas were 65 or older.

**Table 14: Texas Veteran Labor Force Participants by Age Group, 2014**

Age Group	Number	Percent
18 to 35 years	150,527	18.5%
35 to 54 years	349,376	42.9%
55 to 64 years	184,759	22.7%
65 to 74 years	105,945	13.0%
75 years and over	22,987	2.8%
Total	813,594	

Table note: 2014 ACS microdata.

Veteran labor force participants held various jobs in numerous industries throughout Texas. Table 15 illustrates the percentages of veteran labor force participants by general category of work, also referred to as class of worker. Approximately 62 percent of veteran labor force participants in Texas were employees of private, for-profit companies in 2014. Approximately 24 percent were federal, state, or local government employees and nearly 7 percent were self-employed.

**Table 15: Class of Worker for Texas Veteran Labor Force Participants, 2014**

Class of Worker	Number	Percent
Employee of a private for-profit company	500,606	61.5%
Employee of federal, state, or local government	191,504	23.5%
Self-employed in own business, professional practice, or farm	55,402	6.8%
Employee of a private not-for-profit organization	33,619	4.1%
Self-employed in own incorporated business, professional practice, or farm	28,905	3.6%
Unemployed or never worked	2,568	0.3%
Working without pay in family business or farm	990	0.1%
Total	813,594	

Table note: 2014 ACS microdata.

Table 16 illustrates the 20 Texas industries in which the highest percentages of veteran labor force participants were employed in 2014. These 20 industries employed 51 percent of the veteran labor force in the state. The industry that employed the greatest percentages of veteran labor force participants was

construction. Approximately six percent of Texas veteran labor force participants worked in the national security and international affairs industry in 2014. The third largest employer of veterans was hospitals.

**Table 16: Top 20 Industries Employing Texas Veterans, 2014**

Industry	Number	Percent
Construction	63,266	7.8%
National security and international affairs	47,481	5.8%
Hospitals	35,636	4.4%
Justice, public order, and safety activities	35,416	4.4%
Elementary and secondary schools	32,260	4.0%
Support activities for mining	24,913	3.1%
Restaurants and other food services	19,565	2.4%
Computer systems design and related services	16,720	2.1%
Truck transportation	15,690	1.9%
Architectural, engineering and related services	15,286	1.9%
Colleges and universities, including junior colleges	13,262	1.6%
Air transportation	12,054	1.5%
Real estate	12,039	1.5%
Management scientific, and technical consulting services	11,501	1.4%
Insurance carriers and related services	11,433	1.4%
Employment services	11,286	1.4%
Services incidental to transportation	10,415	1.3%
Automobile dealers	9,810	1.2%
Industrial and miscellaneous chemicals	9,346	1.1%
Department and discount stores	9,299	1.1%
Table total	416,678	51.2%

Table note: Data are from 2014 ACS microdata. Only the top 20 industries are included in this table. The total number of Texas veteran labor force participants was 813,594 in 2014.

### Average Salaries of Texas Veteran Labor Force Participants

In 2014, Texas veteran labor force participants earned an average salary of \$53,465 (inflation adjusted for 2014). However, salary differences exist within the veteran population based on numerous demographic factors. On average, male veteran labor force participants earned \$54,630 whereas females earned \$43,995. Salaries also vary depending on level of educational attainment. Table 17 illustrates that veteran labor force participants with a high school diploma or equivalent earned an average yearly salary of \$39,166. Average salary generally increases with higher levels of educational attainment. The highest average yearly salary was earned by veteran labor force participants with a master’s degree or higher. Veterans with an educational attainment level below the ninth grade tend to be associated with lower annual wages.

**Table 17: Average Yearly Salary for Texas Total Veteran Labor Force Participants by Educational Attainment, 2014**

Educational Attainment	Percent of Texas Veteran Labor Force Participants	Average Yearly Salary
Less than 9th grade	0.9%	\$28,507
Grade 9 through 12 no diploma	1.9%	\$31,300
High school graduate (includes equivalency)	21.5%	\$39,166
Some college no degree	33.4%	\$47,064
Associate's degree	11.3%	\$50,920
Bachelor's degree	18.8%	\$66,624
Master's degree and higher	12.1%	\$104,814

Table note: 2014 ACS microdata.

## Concluding Comments

This study has provided a demographic overview of veterans for both the U.S. and Texas. A demographic description of the U.S. veteran population was first presented to provide context for the analysis of Texas veterans. The Texas veteran population was then detailed using ACS microdata with a focus on disabilities and the characteristics of veteran labor force participants.

National data illustrate the decline in the veteran population due to the mortality of older veterans who served in the earlier periods of World War I, World War II, and Korea. Veterans are not evenly distributed throughout the country, and states with the largest populations generally have the largest number of veterans. Compared to nonveterans, the veteran population tends to be older, more educated, white, and male. Data also indicate that female veterans, including those in Texas, constitute a greater percentage of the veteran population for later periods of service.

The median age of a Texas veteran is 63 years old and the largest number of Texas veterans served during Vietnam. The median age for a Texas veteran labor force participant is 45. The prevalence of disabilities is greater among veterans, since the veteran population is older than the nonveteran population and the likelihood of developing a disability increases with age. Generally, the unemployment rate for veterans is lower than the state's average; however, age variations exist. In 2014, the unemployment rate for Gulf War Era II Texas veterans was 5.2 percent compared to all Texas veterans at 4.1 percent.

Overall, the analyses presented in this study illustrate the diversity of the veteran population according to age, educational attainment, and reported disabilities. As a result, the needs of the 86-year-old male World War II veteran who separated from active duty in the late 1940s are different from the needs of the 22-year-old female Gulf War Era II veteran who separated this year and is going to school for career training.

The veteran population is a valuable resource for Texas employers and the Texas economy. The data provided in the demographic study is presented to assist policy makers and program planners in the design and implementation of relevant programs and services.

## **Appendix: Veterans by County in Each LWDA, 2014**

This appendix illustrates the numbers of veterans by each county in the local workforce development areas. In the following tables, the total, male, and female 2014 veteran population of each county is illustrated. Additionally, the numbers of veterans are presented by age categories (17 to 44, 45 to 64, 65 to 84, and 85 and up). The estimated numbers of veterans are from U.S. Veterans Affairs VetPop2014 projections. Rounding may affect totals.

**Table 18: LWDA 1 Panhandle–Veterans by County, 2014**

A close-up photograph of the American flag, showing the blue field with white stars and the red and white stripes. The flag is draped and folded, creating soft shadows and highlights on the fabric. The stars are arranged in a grid pattern, and the stripes are clearly visible at the bottom right.
