

## A NEW BORDER MODEL

Relocation of Headquarters of the Secretary of Public Security **from Chihuahua City to Juarez / El Paso.**

*I want to share what i have decided, to implement based on this diagnosis:*

**1. Security:** Sharing information and intelligence **among states**. The state of Texas could have eyes in this side of the border.

**Sentinel Platform:** which includes almost 10,000 cameras (2,000 video analytical and license plate recognition, 11 biometric filters and facial recognition). **We will build a safe border through air patrol.**

**Migrant biometrics and personal information data base.** (By driver license registry).

**Anti drone system.**

**Capture cartel leaders** based in both databases (drugs and human trafficking).

**Artificial intelligence system** based in algorithms.

**2. Trade:** Track commercial trucks that come from industrial parks in Juarez, as well as other parts of our state. Keep a permanent track of every shipment.
